

INTELLIUM

Your platform for advanced analytics:
An accessible source for all your management, performance and advanced analytics needs.

Intellium delivers real-time interactive data so clinicians and managers can follow patients proactively using self-service data discovery and view the data when needed in the preferred format.

It connects to virtually any data source, centralizes information, and its integrated security system is built according to the specific requirements of the healthcare system.

Intellium facilitates self-service exploration of the full dataset with the freedom to query and use information as needed. No technical expertise is required, and the solution also includes unlimited use of Power BI. Users can create customized data schema modeling and design or edit reports as needed.

Accessibility

Data at your service - information at your fingertips

Learning

An integrated support within our solutions

Autonomy

Freedom in the exploration and exploitation of your data

The platform was designed for healthcare workers by healthcare IT experts. The information is transposed for faster and better decision-making. Continuous improvement ensures the iterative evolution of data quality and information supports.

CONTINUUMCORE

Your comprehensive patient-centric datamart

ContinuumCore provides full access to a scalable datamart. As needs and data evolve, ContinuumCore also does, ensuring that clients always benefit from fully-optimized data management.

Centralized data

ContinuumCore integrates more than 100 connectors into a single data warehouse, and new data connectors are regularly added. It provides a single point of access to all your clinical and financial data while ensuring that the impact on your source systems is limited, planned and controlled.

Organized and documented data

ContinuumCore lets users organize their data by topic for easy use. The solution also provides agnostic data for seamless querying of diverse sources as well as dictionary-based data documentation for precise definitions, easy understanding and fast searches.

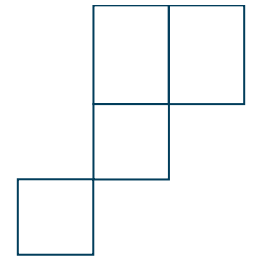

Quality data

ContinuumCore uses data normalization to standardize values and data validation to detect problems. It features data improvement tools, processes and report builders. It also provides a transactional integration process to maintain data coherence at all times.

Enhanced data with cutting-edge tools

With ContinuumCore, regular calculation results are readily available, along with a single definition of the calculation. The solution creates links between data points, per patient or per episode of care, to simplify queries involving multiple topics at once. It is also possible to integrate geospatial, demographic, user-generated and non-structured data.
