

# LOGIC 20/20

## WILDFIRE MITIGATION

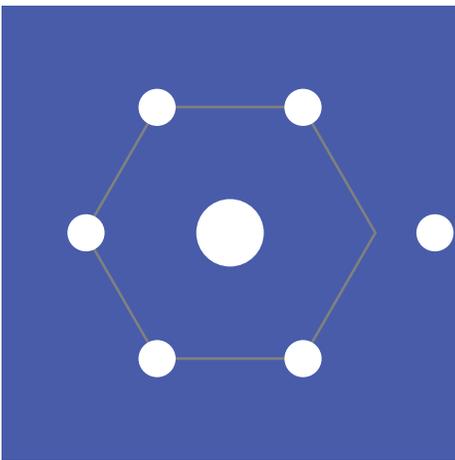

Every year, the cost of wildfires in the United States can run as high as \$893 billion.<sup>1</sup> With utilities under pressure to step up their efforts towards preventing future ignitions, AI-driven predictive modeling offers a way forward to a safer future.

### WILDFIRE MITIGATION PROGRAMS INCLUDE:

- Risk assessment & mitigation strategy
- Situational awareness & forecasting
- Grid design, inspections & maintenance
- Grid operations & protocols
- Vegetation management & inspections
- Emergency preparedness & community engagement

### PREVENTING WILDFIRES, PROTECTING COMMUNITIES

Logic20/20 leverages the most advanced predictive modeling techniques to place the power of wildfire mitigation at your team's fingertips.

We deliver an enterprise risk management framework to guide your utility in operationalizing predictive insights:

1. **Identify** risk using process and tools.
2. **Analyze** with data insights and expert input.
3. **Evaluate** mitigations, efficacy, and timeframes.
4. **Prioritize** risks and mitigations.
5. **Respond** to risk.
6. **Monitor** remaining or residual risk.

### INTERACTIVE WMP TOOL

### INVESTMENT OUTCOMES

**ROI**  
Investment dollars meaningfully reducing risk

**Reliability**  
Fewer unplanned outages and failures

**Safer communities**  
Lives and communities protected
