

Datasheet

Which mobility solution is right for me?

Hybrid working presents significant challenges when it comes to providing secure access to applications and company data, especially as Millennials and Generation Z increasingly expect to work from any device and any location.

Virtual Desktops can be a solution to this problem by allowing for a BYOD strategy or enabling low-end devices to perform more intensive work. However, choosing the right virtual desktop solution that balances usability with budget constraints can be challenging, given the abundance of options available.

Fortunately, Logicalis can provide assistance in navigating this complex landscape, as Microsoft offers two excellent solutions for virtual desktops that enable a true Desktop as a Service model, which can be supported by Logicalis services. These solutions are designed to provide secure and scalable virtual desktop environments that allow employees to work from anywhere, at any time, using any device with an internet connection.

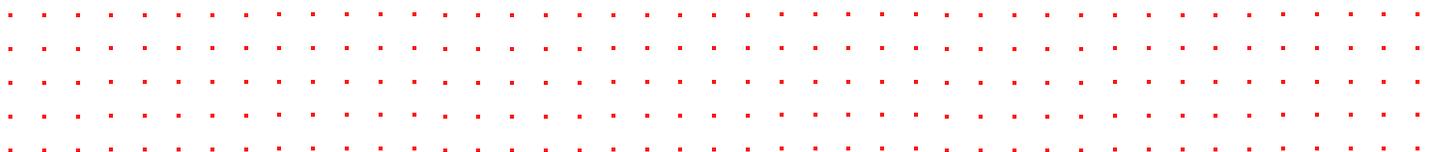

Azure Virtual Desktop and Windows 365 are both cloud-based solutions that provide virtual desktops to users, making it easier to work remotely and enabling hybrid working. With these solutions, users can access their desktops and applications from anywhere, at any time, using any device with an internet connection.

Azure Virtual Desktop is a virtualization solution that allows users to access virtual desktops and applications hosted on Microsoft Azure. It offers the flexibility to scale resources up or down as needed, allowing businesses to easily manage their virtual desktop environments.

Windows 365, on the other hand, is a new cloud-based service that delivers a full Windows experience to users via the Microsoft Cloud. It enables users to stream their personalized Windows experience on any device, making it ideal for hybrid work scenarios.

Both solutions provide a secure and scalable way for businesses to manage and deliver virtual desktops and applications, helping to facilitate remote work and hybrid working arrangements.

Finding the right Microsoft Solution

for your needs

Windows 365

Secure work on personal PCs

Onboard and offboard employees

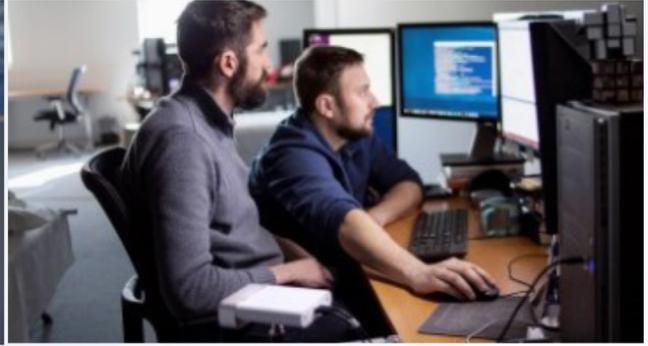

Simple to buy, deploy, and manage

No employee or IT special skills or training

Quickly scale and resize

Azure Virtual Desktop

Shift on-premise VDI to the cloud

Leverage existing VDI investment and expertise

Enable remote app streaming and non-persistent desktops

Our proven approach helps you along

the journey to achieve employee empowerment

We take a 3 phased approach to helping you quickly implement a Virtual Desktop solution that will be scalable and budget friendly.

Step 1 Align

Perform a series of workshops to create a roadmap to move from legacy telephony solutions to modern communications while aligning to business outcomes.

Step 2 Transform

Executing on the roadmap with services to implement and migrate to the right VDI solution for your end users.

Step 3 Scale

Manage the entire adoption and support process by industry experts. Not just reactive, but proactive support approach to scale as your company grows.
