Datasheet

Modern Endpoint Management

Part of Zero Trust Architecture is securing devices with a more modern approach. Corporate owned and BYOD devices are becoming harder to secure in traditional manners. Logicalis has created a modern approach to endpoint management leveraging the industry leading platform, Microsoft Endpoint Manager. Logicalis will assess current state of management and future outcomes to develop a personalized approach to modern endpoint management. Application deployment, patching, and imaging are time consuming tasks that require complicated infrastructure. Leveraging modern endpoint management can simplify deployment and lifecycle management of all devices.

Imaging is time-consuming and on average takes 4-8 hours per device to image and configure for deployment. Intune Autopilot can cut this down to just 15 minutes per device to enroll and deploy.

Cloud based management can make patching and application deployment easier than traditional means since it doesn't require connectivity to on premises infrastructure. Remove the complexity and upgrade the ability of managing devices anywhere in the world without VPNs.

Enhance security of the organization with the ability to manage devices and compliance policies from the cloud.

In a complex device landscape, you need choices

Microsoft Intune gives you the flexibility and control to secure your data on any device - even those you don't manage.

Information worker | Company managed | Shared | Primary | Employee managed | Companion | Public Kiosk | 3rd Party managed | Contractor

Secure your data on any device with Intune

Intune device management — Intune app management

Enroll devices for management | Provision settings, certs, profiles | Report and measure device compliance | Remove corporate data from devices | Publish mobile apps to users | Configure and update apps | Report app inventory and usage | Secure and remove corporate data within mobile apps

Conditional access: Restrict access to managed and compliant devices | Conditional access Restrict access to apps with app protection policy

59% of organizations are allowing BYOD. This number is expected to increase but requires a modern approach to management of corporate data and applications. Logicalis can help with this roadmap.

Reduce complexity, time to deploy devices by 90% on average, and have a consolidated management platform for all devices (Windows, iOS, Android, MAC).

Redeployed IT time frees up more than $479,000 in human capital to apply to under-resourced projects.

"Whenever there was an upgrade to do there was significant risk. If the update failed, that would cause issues across the company. With things being cloud-based now, I don't have to do upgrades. It's a real benefit for me"

Head of mobile services, healthcare

"The Total Economic Impact of Microsoft Endpoint Manager, commissioned by Microsoft™, April 2021

Ref.	Metric	Calc	Year1	Year 2	Year3
D1	IT hours updating /maintaining endpoints before Endpoint Manager	3 per computer ; 0.5 per mobile	3,000	18,000	33,000
D2	IT hours updating /maintaining endpoints with Endpoint Manager	0.5 per computer ; 0.25 per mobile	1,500	4,000	6,500
D3	Percent of updating hours recaptured		50%	50%	50%
D4	Total IT hours redeployed on configuring /updating devices	(D1-D2)*D3	750	7,000	13,250
D5	Fully burdened hourly salary of IT team members	$50,000+35% benefits / 2,080 hours	$32.45	$32.45	$32.45
Dt	Redeployed IT time	D4*D5	$24,338	$227,150	$429,963
	Risk adjustment	↓10%			
Dtr	Redeployed IT time (risk-adjusted)		$21,904	$204,435	$386,967
Three-year total $613,306			**Three-year present value: $479,601**		

Logicalis uses a 3-phased approach to develop a comprehensive program to modernize endpoint management with your outcomes and goals in mind.

Align

Assessment of current state and business goals to determine the right roadmap to get to a fully managed state for ALL devices including BYOD.

Transform

From the Align phase we will create a program to take a white glove approach to deployment and enrollment of devices into this modern platform.

Scale

Logicalis will fully manage this platform through a proactive lifecycle approach - monthly patching of devices/apps, support of the platform, and assistance with enrollment of new devices.

Contact your Logicalis Account Executive to set up a workshop to develop your roadmap to Modern Endpoint Management.
