

M365 Assessment

Adoption

Are you fully utilising all the functionality within your M365 rollout?

This assessment follows our step-by-step methodology based on insights from our most successful customers who have maximised the power of their investment, adopting multiple, integrated technologies that now form Microsoft 365.

Security

Gain peace of mind and achieve more by better protecting your data and customer information from costly cyberattacks. Microsoft 365 combines the productivity tools you need with comprehensive security features.

Compliance

Defensible compliance programs know their risks. Microsoft 365 helps streamline the formal risk assessment process by centralising data, conducting analyses, and facilitating prioritization. Reporting dashboards and interactive presentation capability are becoming increasingly important to compliance.

We include recommendations on adoption, security and compliance to help you make the most of your investment.

How can we help?

Logicalis can help maximise the investment in your M365 rollout and help securely run and grow your business. We provide recommendations along with a timeline to prioritise and show where you can better leverage your existing investments, to help you further adopt and secure your environment.

Key Benefits

- Identify opportunities to leverage the technology you have
- Become less vulnerable to cyberattacks
- Control who has access to your information – and who doesn't
- Collaborate more securely across your business
- Improve data security in the cloud
- Keep up with your customer demands
- Focus more on growth, and less on IT
- Avoid duplication of technology investment

Following the assessment our skilled team can help

- Consultancy around adoption, security, and compliance
- Managed Service solutions
