

# Data Platform Modernization: 3-week Implementation

Build your foundation for an insights driven organization

Organizations are swamped in data. **According to IDC, by 2025, the volume of data is expected to hit 175 trillion gigabytes.** Insights from this data can be a rocket fuel for their growth. Instead, these organizations struggle to extract value due to their complex legacy and siloed infrastructure that lacks the ability to provide fast insights.

For organizations to keep up, they must take advantage of the scalability, performance, administrative and security benefits of the cloud while at the same time leverage the ability to tap into services that enable intelligent decision making.

Data workloads are the backbone of your infrastructure. It is critical to partner with an organization that can not only work with you to define a data vision but also help you execute it with minimal disruption, while maintaining security and compliance.

## Why Azure for modernizing your data workloads?

### Unique cost savings

Save money with unique offers and programs

### Industry leading security

Benefit from Microsoft's \$1 Billion investment into building security and compliance

### Unparalleled innovation

Accelerate modernization by simplifying administration and opening new possibilities

## Trusted partner to engineer your modern enterprise

At Logicworks, we bring our experience of doing 400+ Cloud migrations in each of our engagements to provide a reliable path for you to transform your data estate on Microsoft's Modern Data Platform.

### Our Delivery Process

#### Assess

Introduction workshop with stakeholders to understand business priorities

Conduct a technical review of the current data infrastructure to understand complexities

#### Design

Create a Modern Data Platform reference architecture design that meets your performance, storage, backup, disaster recovery, security and compliance requirements

#### Build

Configure and deploy the modern data estate and set-up the required security and compliance controls

#### Migration

Lift and install data in the new environment along with migrating necessary schema and objects

### Final Deliverables

Duration: 3 Weeks

Cost: \$25,000

Fully operational and secure cloud environment for your workload

Documentation of new environment: Scripts, credentials and any other knowledge transfer

Post migration documentation

"Logicworks project management to engineering to expertise in security and automation, it's pretty amazing."

– Jens Skjoedt, Director of Consumer Support, Stibo Systems

### About LogicWorks

25+ Years

in Business with 400+ Cloud migrations
