- Provide optimal manufacturing outputs.
- Deliver exceptional customer service.
- Automate workflows and processes.
- Tailor the software to your needs.
- Facilitate project success.

Key findings

Quantified and Unquantified benefits.

Improve flow of operations by an average of 8%. Finance and operations professionals have better tools to execute their daily responsibilities, improving workflows throughout finance and operations.

With the capabilities of using tools such as Power BI, word reporting and excel features, Business Central users can save more than \$44K of third-party reporting spending over three years by eliminating reliance on externally generated reports for more granular visibility into their business.

Avoidance of more than \$40K in costs pertaining to the previous solutions. Migrating from on-premises Microsoft and non-Microsoft ERP tools yields savings in the form of license fee and infrastructure reductions, as well as support personnel savings.

On Dynamics 365 Business Central, employees are less burdened by some of the common frustrations around finance and operations exacerbated by a disparate set of ERP tools.

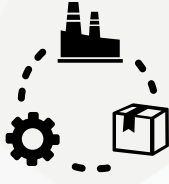

Integration with Microsoft applications such as Word, Excel, outlook, and other Microsoft cloud solutions such as SharePoint and Power BI, allow companies to have unmatched use of their data and eliminate double data entry.

Increased confidence thanks to real-time visibility. Organizations can now view key business data, reports, and metrics in real time.

Functional areas covered by Business Central

Distribution

Microsoft Dynamics 365 will help you respond to changing market conditions by improving your ability to predict and respond to changes in end-customer demand.

E-commerce

The architecture and functionality of Dynamics 365 Business Central and the cloud first approach, make it particularly well suited for businesses thinking of opening e-commerce websites.

Sales

If you use Dynamics 365 Sales for Customer Engagement, you can enjoy seamless integration in the lead to cash process by using Business Central for backend activities such as processing orders, managing inventory, and doing your finances.

Financial

With Business Central you will be able to integrate financials into core business processes and automate tedious and time-consuming tasks, support evolving business models, and maximize financial performance.

Project Management

In Business Central, you can perform common management tasks, such as configuring a job and scheduling a resource, as well as providing the information needed to manage budgets and monitor progress.

Human Resources

In Business Central, you can keep detailed records of your employees. You can register and maintain employee information, such as employment contracts, confidential information, qualifications, and employee contacts.

Warehousing

An efficient warehouse management system can help significantly to achieve success for your company. Microsoft Dynamics 365 Business Central can give your company the tools to reach chain management objectives.

Manufacturing

Microsoft Dynamics 365 Business Central can create positive change within a company by optimizing processes, reducing manual labor, increasing productivity, gaining overall visibility and much more by consolidating core company functions into a single and centralized ERP solution that can be accessed from any device and anywhere.

Implementation Methodology

Diagnostic

Evaluation of customer business processes and infrastructure.

Business requirements understanding.

Project plan preparation.

Analysis

Everything starts with listening. We gain an understanding of your company, how you operate and your goals to develop a vision of how you want to see your future software.

Design

We design a plan to bring the vision of your future software to life and pull it together with the implementation of the most modern technologies.

Development

We build a solution following the standard functionality however, we recognize that every client is different and needs a software that can be adapted to the way they run their business without difficulties.

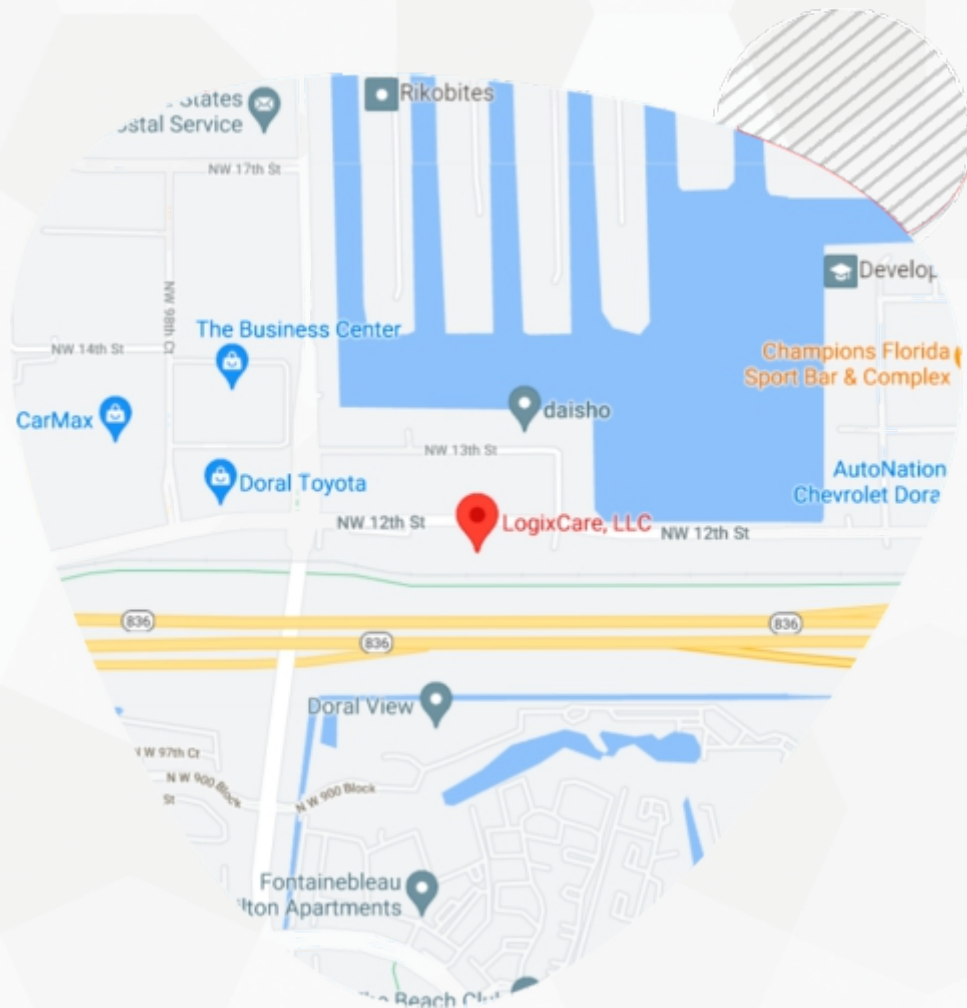

Deployment

We will execute a final test of the system to make sure everything works right and smoothly. We conduct a rich go-live check that helps us explore and assess the quality of the solution in the production environment.

Operation

Once the software is ready, we will provide you and your employees with all the training needed to be able to change systems with the minimum possible disruption.
