Power Apps Attendance Management System

Analysis

We initiate by assessing your current process identifying the important needs and collaborate to lay the groundwork for the documentation taking into consideration the size of the organization and different locations to be configured on the application.

Our solution

Introducing our
Power apps Attendance Management Solution (PAMS),
a compact solution designed to automate clock in and clock out processes with and admin dashboard for management and configurations.

UI/UX Design

We bring your ideas to life with designs that speak to the requirement for the application, this is the first groundwork for development, where on approval of the design development starts. A team of our experts will bring to live designs that meet the taste and culture of the organization.

Documenting Process

We leverage analysis insights to create a detailed plan showing design, features, functionality, and user experience aligning with your company culture and vision.

QA testing and Requirement Validation

By identifying potential issues before they impact your users, we help you mitigate risks and avoid costly post-release fixes providing ongoing support and guidance throughout the development lifecycle.

Application Development and Implementation

With the plan in place, our expert developers get to work designing, testing, deploying and integrating applications tailored to your business needs.

Go live and Support

In this crucial stage a team of our experts will ensure the app is fully functional, stable and accessible to the end user in the production environment and we will ensure that the app continues to operate smoothly and resolve any issues that arise.

Deployment

With the plan in place our expert developers get to work ensuring that the application is launched in the right environment and configured appropriately.

Time sheet management is more seamless, and we are impressed by the product

Testimonials
