How You Can Use Digital Signage with Power BI

Manufacturing Production Data

Monitor your production line with real-time data to spot slowdowns, boost efficiency, and review process performance.

Sales Efficiency Data

Track your sales team's performance, refine strategies, and boost sales with insights on deals, conversions, and lead follow-ups.
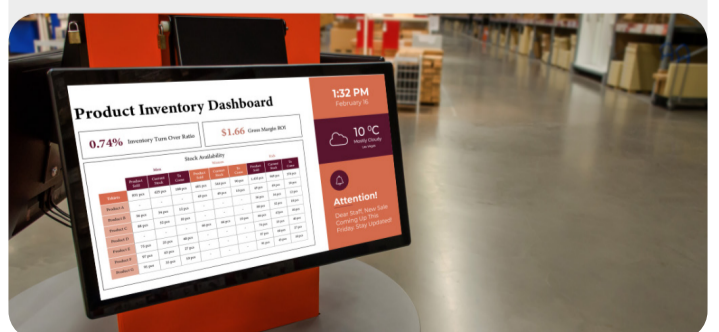

Forecasting Data

Use past trends and real time-data to predict future outcomes, adjust strategies, and stay ahead of the curve.

Inventory Management

Track warehouse inventory to avoid overstock or shortages and optimize inventory.

Why Digital Signage with Power BI is a Game Changer

Manage big data and complex queries efficiently with Power BI

Choose from a variety of custom layouts to make your reports stand out

Monitor live data with real-time streaming and get up-to-the-minute insights

Easily pull together data from different sources for a 360 view

Getting Started with Power BI

To begin, log in to the L Squared Hub. Once you're signed in, navigate to **'Content Library'.**

Next, click on **'Add New Content'** at the top left-hand corner.

Now select the **'Create Widget'** tab on the top. On the left-hand side, you'll see the **'Search bar'**. Here, type in **'Power BI'** or scroll down till you locate it.

1

2

3

Then, click on **'Authorize'.**

Name your widget in the text box and click on **'Next: Authentication'.**

5

4

Choose between displaying a dashboard or a report. Click **'Select Report'.**

Choose the report and the page of the report that you would like to display, then **'Save'.**

Now, too schedule your content, click on the green **'Schedule'** button at bottom of the screen.

6

7

8

Finally, complete the 5 steps of scheduling and select the devices you want to display the report on, and **'Save your schedule'.**

Name your new schedule, set its group and priority, and make sure it's set to **'Regular'.**
