

Mandatory Documents: -

Description:

This application helps end user to take backup of D 365 solutions in manual and planned way. User have choice of taking backup of solution both managed and unmanaged at the same time. End User can select one solution at a time and scheduled backup for one time, daily, weekly, monthly frequency.

Type of User:

Any one from end user whether its Developer & Customer can use the tool.

Pain Area-

D365 CRM does not provide inbuilt backup feature hence having a comprehensive and adaptable Dynamics 365 solution backup functionality (both managed and unmanaged) in place is increasingly important for D365 customers.

Backup and recovery solutions capture a point-in-time copy of a solution file and write the data out to a local device so that users can recover it in the future.
