

PowerCop Solution offering

LTIMindtree' PowerCop, a centralized solution, addresses development and governance challenges within Enterprise by providing host of features such as:

- ✓ Strong governance with a central solution to manage applications, licenses, environments, developer requests, & deployments.
- ✓ Code review to analyse the application for code quality, performance issues against a prebuilt checklist and provide a report.
- ✓ Unified enterprise application dashboard to provide a view into application approval statuses and development progression.
- ✓ Best practices which contain prebuilt checklist of across severities to indicate level of conformance and nonconformance.
- ✓ License over-usage risk mitigation to ensure the required application connects with components such as Microsoft 365, Power Apps, Power Automate, Dataverse used by developers with proper license and well within subscription limit.
- ✓ Strong Collaboration between the application developer, solution consultant, and professional developer to ensure the required business, technical & solution assistance is provided to enable development as part of the overall CoE program.
- ✓ Centralized application lifecycle management to sum up all the core capabilities and thereby enabling the CoE to manage applications lifecycle from application inception to solution consulting, to expert enabled development, to a qualitative application module, to a seamless deployment and propagation to production environment

PowerCop Features List

ENVIRONMENT REQUEST

Facilitate request for management of environments

APP REQUEST

Simplified submission and tracking of app development

DEPLOYMENT REQUEST

Streamlined process for requesting and managing deployments
