# Security for Cloud Infra & Services

Azure

Secure Cloud Architecture	Identity & Access Management	Key Management Services	Security Layers (Firewalls, Logging, Monitoring &Alerts)	Encryption for data at rest	Security Standards Compliance

Our expertise

Designing secure cloud architecture across all cloud platforms	Integrating DevSecOps with the cloud	Implementing Secure device identity management, OTA services in the cloud	Integrating security layers, including firewalls, logging and monitoring, identity and access management services	Encryption and Key management services	Integrating Security Compliance Check

Areas of Expertise

Our Security Offering Philosophy is about keeping you and your end-users safe from Cyber Threats

Application

- Secure SDLC with DAST/SAST
- API Security
- Identity & Access Management
- WAF
- SSL Offloading
- Malware protection

Storage

- Secure storage
- Secure key management
- Data encryption
- Disk encryption
- Back up & recovery

Network

- Security groups/ access control
- VPN/ VPC
- DDoS protection
- Identity & Access Management
- SIEM
- IDS/ IPS

Operations

- Security Monitoring
- Threat hunting
- Incident response
- Forensic services
