

# Evergreen Governance Case Study: Tertiary Education Commission, NZ

## Evergreen Governance as a Service

Evergreen Governance as a Service from M2Cloud.Services provides TEC continual monitoring and management of changes and opportunities within the Microsoft 365 stack of technologies.

Each change, be it a technical configuration or the introduction of a new feature or entire new product line, is triaged by M2Cloud.Services, the impact on TEC is evaluated and if action is required, the change will be assigned to the appropriate members of the Evergreen Governance Workgroup, to conduct business and technical impact assessments.

M2Cloud.Services chair the Evergreen Governance forum and ensure the relevant people from within TEC are aware and have provided input where required on each change coming from Microsoft.

M2Cloud.Services is also helping to establish an org-wide champion network to drive adoption, productivity, innovation and to act as a feedback loop for Evergreen Governance.

## Win Results

The establishment of an Evergreen Governance process and workgroup that integrates with existing processes, systems, and pre-existing governance forums. These forums now have greater insight into the constantly evolving Microsoft 365 stack, enabling more informed planning & decision making.

The subject matter experts in the new Evergreen Governance Workgroup are now able to keep their finger on the pulse and have their voice heard, without being slowed down by content that's outside their field of expertise or irrelevant to TEC.

With greater visibility across new and changing features within Microsoft 365, Product and Business Owners are better able to balance technical enablement with stakeholder priorities and demand.
