What is Agentic AI?

Agents that use AI to automate and execute business processes, nearly autonomously. They can plan and adapt to new information and act on tasks independently.

To make this a reality, successful AI applications require:

Data Layer

Enterprise-wide data and organizational context

Intelligence Layer

AI development platform and powerful AI models

Launch Your Data Layer Fast

Blaze automates the buildout of a modern, metadata-driven lakehouse—accelerating ingestion, schema creation, and medallion architecture (bronze-silver-gold) using Fabric, and/or Databricks.

Microsoft Fabric   Microsoft Azure   databricks

Value understood.

How do we activate our data strategy with a modern foundation—without delay or risk?

Macula's Blaze lakehouse accelerator simplifies the delivery of a modern, governed lakehouse platforms—getting data flowing end-to-end in weeks, not months.

Fast Time-to-Value: Deploy automated data pipelines in weeks.

Metadata-Driven: Add tables and fields with simple config—no rewrites.
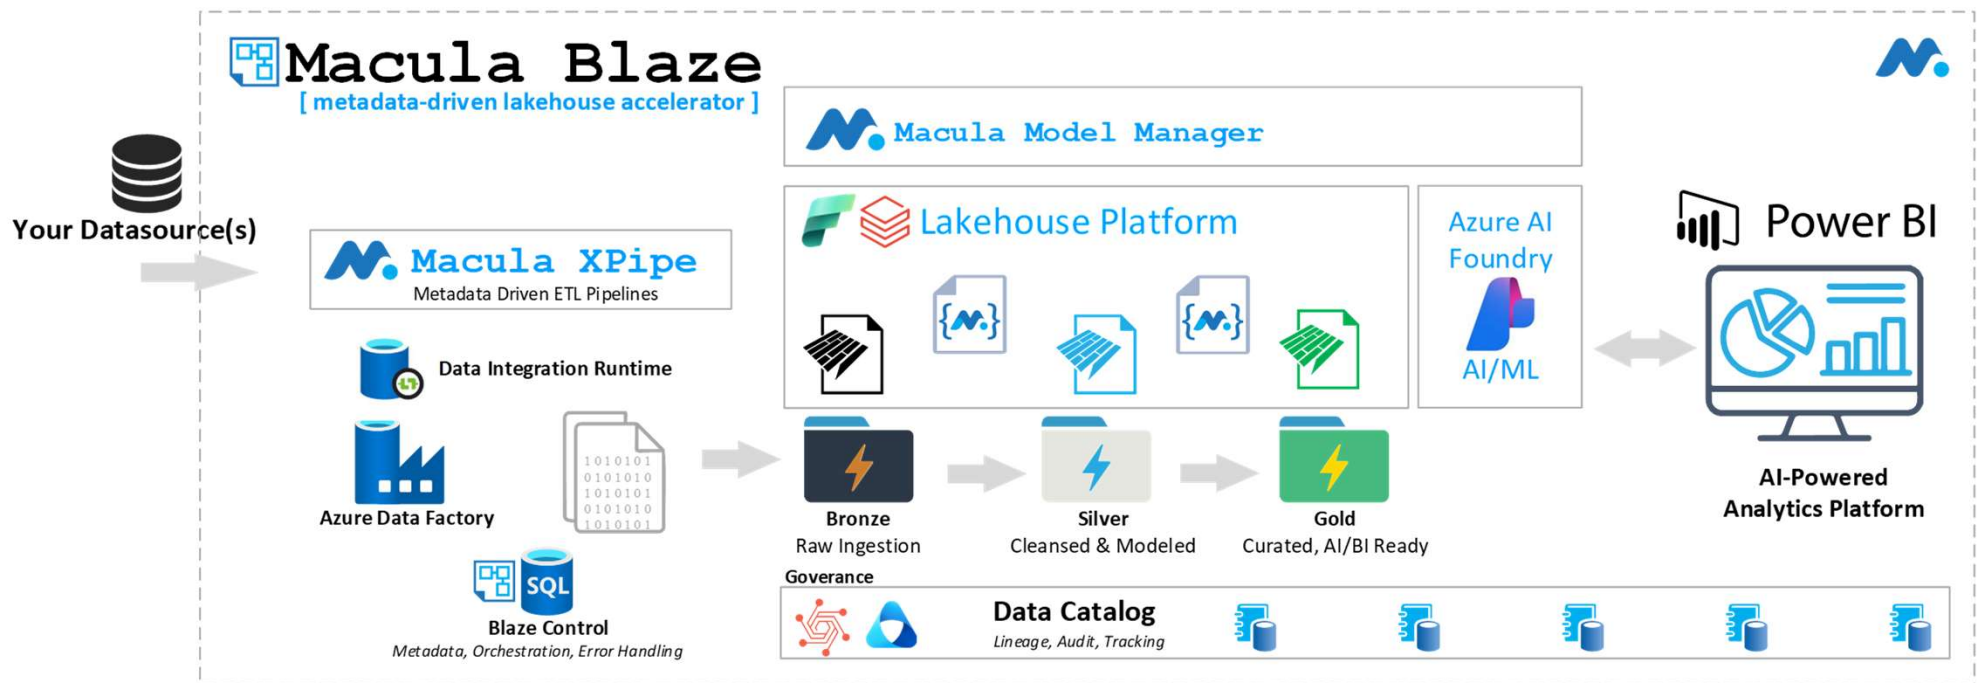

Governed & Observable: Track lineage and health with audit logs and dashboards.

Scale-Ready: Seamlessly scale and promote artifacts from dev to test to prod

Macula Blaze: Fast-Track Your Modern Lakehouse Platform

Engagement
