Custom Development Expertise

Today's modern organizations must adapt in real time. And often, off-the-shelf software just isn't going to cut it. Magenium can help you break through with digital tools tuned to your company's exact needs. Tell us your vision — together, we will turn custom software into your company's competitive advantage.

Azure DevOps

Faster time-to-market is critical in today's accelerated (and often remote) business environment. With Azure DevOps, we are able to streamline our continuous development & integration processes to bring you vision to reality faster than ever before.

Web and Mobile Development

Mobile isn't just a nice to have, it's an expectation that your customs have of you. Having a mobile-friendly website is critical, and in many cases, a custom mobile application is a tremendous way to build your brand's image and increase revenue.

Artificial Intelligence

Nobody does cutting edge better than Microsoft, and Magenium has deployed AI in some really unique ways. From facial recognition and sentiment analysis to task-specific business process automation, we can make AI a reality for you.

Infrastructure Services

The nature of information technology and infrastructure has changed dramatically over the last 5 years. Our experts can help you define what you environment should look like, deploy it, and secure it using the latest tools from microsoft.

Internet of Things

Connected devices are now a way of life - and with help from Magenium, we can build you a custom connected device that delights users in new and unique ways. Bring the power of the Internet to your business.

Power BI and Power Apps

In the old days, you needed a full-time developer just for SSRI reports. Now, we can build low-code dashboards in Power BI very quickly. And with Power Apps, we can build you custom applications with multiple data sources in record time.
