

Build and Operate Your IoT Vision

We implement your IoT vision according to your needs

MaibornWolff designs, builds, and operates your IoT solution based on Azure IoT— together with your own team! It's up to you to decide whether you want us to empower your team, to develop your solution, or to run the whole thing including operations.

See what customers are saying:

"Our IoT solution now has a solid and manageable basis for digitizing our heat pumps and home ventilation units. What we have created here due to the help of MaibornWolff in just three and a half months is something to be proud of."

*— Jens Rammensee, Head of Product Management,
Glen Dimplex Germany*

WHAT WE OFFER

IoT Solution Team

Design, build and run your solution in an agile team, led by MaibornWolff IoT experts!

We are well-experienced in various team settings: enabling your team, embedded in your team or standalone.

IoT DevOps

We provide application and infrastructure operations for your IoT solution. For we strongly believe IoT solutions need to be designed and built for efficient operations from the ground up.

Empowering your team

We are convinced that your IoT solution is part of your product and that eventually you should be the expert. To that end, we facilitate close and transparent communication, mixed teams and regular hands-on tech sessions.
