AKS done right!
Container Orchestration on Azure

Microsoft Azure

You've just decided to take the next step in technology by using state-of-the-art services and infrastructures on Azure with Kubernetes? At the same time, you feel a bit lost with all the options and possibilities?

Worry no more! Start your cloud journey with our AKS pros who gathered a comprehensive set of experiences and learnings in the field over years!

WHAT WE OFFER

Automation To fully benefit from a relocation to Azure and AKS, a high rate of automation is needed. Productivity and efficiency are increased by automated deployments of infrastructure and services using CI/CD, while mechanism like auto-scaling and a resilient design guarantee high availability of your platform.

Migration Are your systems / applications "cloud ready"? We will help you to identify the necessary steps and plan them together with you. No matter whether you want to "lift and shift" or refactor your services in the way of the "12 factor app": we are ready for every possible scenario!

Learn Aside from setting up your Azure platform, one of our biggest goals is getting your team ready to become AKS experts. With modern DevOps techniques like pair programming, your employees will be involved in every step and learn directly from our experienced professionals.

Observability Your new AKS isn't of much value, if you have no clue what's going on inside. We'll help you setting up broad observability for logging, monitoring, tracing, and alerting, so you are well prepared for everything that's way ahead.

Ready? We are.

And this is what our customers say:

"I'm teaming up with MaibornWolff, because I'm looking for people who don't just do everything I say."

– **Stefan Metzenauer, BMW Group**
