

Azure Landing Zone

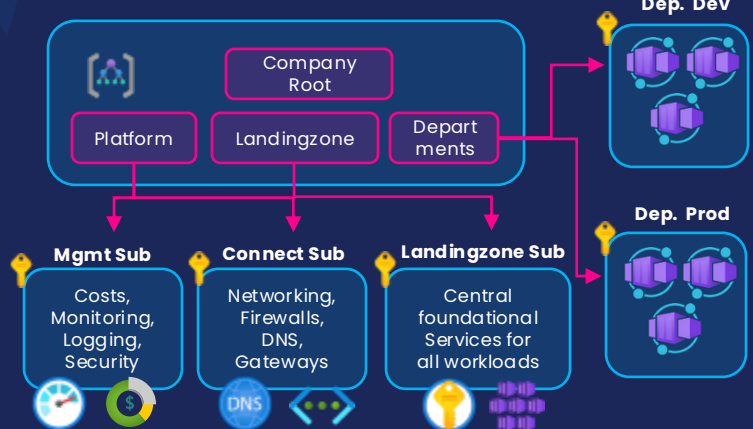

We help you getting started with
Your Azure journey

What will **we** do together?

What are **your** advantages?

- **Rapid Deployment:** fast way to bootstrap a new developer environment based on blueprints
- **Best practices Compliance:** integrating Landingszones means, every new environment is built secure on Microsoft Best practices and Compliance
- **Flexibility & Scalability:** We help you to setup your Landingzone implementation along your Requirements and Roadmap. The concept, is scalable and grows with your landscape.
- **Consistency:** Landingzones brings consistency and security across all your different environments, based on your architectural guidelines.
- **Efficiency:** from the operational perspective, This baseline ramp up your efficiency on a new level

What are **we** building?

How do **we** work together?

01 Exploration

We get an overview with workshops and architecture reviews, provide feedback on technical feasibility and requirements, and assess what kind of Landing Zone could align with your roadmap.

03 Scale

We start adding more and more components to your freshly designed Landing Zone until we are done with the initial setup. Due to the use of IaC-Templating and automation, **We** create a rebuildable and safe platform.

02 MVP

We start with an MVP based on your needs from phase one to get started right away and collect first impressions and feedback. Afterwards you gathered enough information, to decide whether you want to go on or not.

04 Improve and Iterate

Your success does not only belong on innovative tech or faster delivery, but also on stable and reliable Operations. **Together** we take care of that and improve your newly deployed Landing Zone even further.

"Setting up an Azure Landing Zone is an easy and fast way to get yourself started in Azure. With the use of IaC and Pipeline Blueprints the setup can be done really quick and the central layers of networking, management, security and IAM make Governance and Cloud Management a job that is easier to handle, following the principles of DevOps Culture."

Maximilian Schaugg
Senior Lead Cloud Architect
