# Cloud Migration & Hypercare

After **Your** migration, **We** still care

**MAIBORNWOLFF**

## What *will* *we* do together?

### Migration
**We** migrate your application together with **your** team into the Azure cloud

### Care
**We** take care of the freshly migrated application together with **your** team and keep it running and secure

### Enablement
**We** empower **your** team to be able to run your new cloud application on your own and anytime

### Security
**We** secure your application to ensure resilience, compliance and continuity.

## How do *we* work together?

### 01 Exploration
**We** get an overview with workshops and architecture reviews, provide feedback on technical feasibility, security and requirements, and assess what resources we need for your application.

### 02 Migration
**We** migrate the chosen application together with **your** team with the use of best practices from Microsofts CAF and automation tools like Azure DevOps.

### 03 Shared Care
**We** start operating the freshly migrated application together. Due to the use of skilling methods like Pair-Programming or hackathons we enable **your** team to run the platform on their own.

### 04 Hand Off
After the shared care phase and **your** team is all skilled up, a proper hand off will be done. Together **we** create the operational manual and do a final check of all aspects of the platform.

*"A Cloud migration for an application significantly enhances an organization's IT agility, scalability, and cost-efficiency. This transition enables a more flexible and scalable IT infrastructure, providing a competitive advantage in the digital era. Together with our Experts we empower your Team with the needed know how to efficiently host your application on Azure in a secure way"*

Maximilian Schaugg
