Design Your Threat Protection According to Your Own Needs

OUR PROCESS

| PLANNING | PREPARATION | IMPLEMENTATION | SUPPORT |
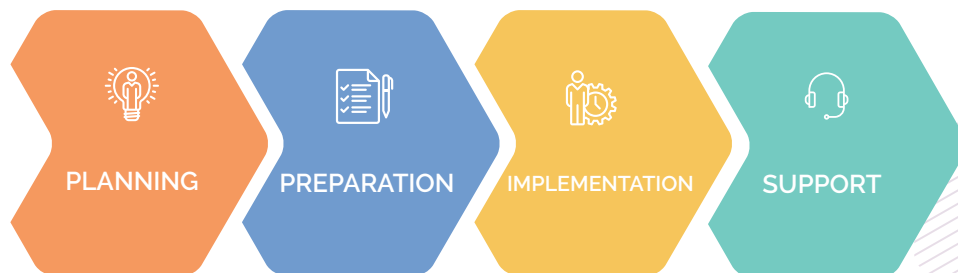

Planning: Identify the users protected by Microsoft 365 and the default policies for the service.

Preparation: Set up the Defender default policies in monitor mode and license users in preparation for the implementation phase.

Implementation: Block or Replace mode rules will be set up for a small subset of users to pilot the features prior to turning on the feature for the rest of the users. Once the pilot is complete, the default policies will be converted to Block or Replace mode.

Support: Customize rules for individual users and or groups and add customizations to existing and or new services not part of Defender (Anti-Spam, Anti-Malware, DKIM, ATP Anti-Phishing). Set up configurations from the Security & Compliance center (Data Loss Prevention, Data Governance, Reporting, Data Classifications)

THE MICROSOFT & MANAGED SOLUTION ADVANTAGE

While we follow our tried and true process, we are providing more than a product; we are providing a customized solution fit to your budget, timeline, and goals. We lean on the innovative Microsoft technologies to support your business, and add in our specialized and certified engineers, making sure we align the right skill sets to the right job. In addition to our Solution Architects and Implementation Specialists, you'll have access to a Project Manager to ensure timely delivery of the Scope of Work, and checking in regularly for any necessary changes or updates. At the end of each project, we do a full review to make sure you're satisfied.

With threats only increasing, it's critical to get protected, and what better way to keep your users and data safe than with the industry leader. You can't go wrong with its powerful campaign analysis, automated responses, integrated protection, detailed and actionable reporting, threat investigation, and compromise detection and response.

Threats are lurking. What are you waiting for? Contact us today.
