

## Identity & Access Management Health Check

Quantitative and Qualitative analysis of existing Directory Service – either on-premise Microsoft Active Directory (AD) or Microsoft Azure Active Directory (AAD)

### Who is this for?

New and existing customers running either or both of:

- On-premise AD, especially where it has grown organically or been subject to upgrades, mergers or divestitures
- AAD Cloud infrastructure customers involved in upcoming mergers or divestitures

### Customer Benefits:

Customers will benefit from:

- A quick-view “line in the sand” view of IAM model
- Knowledge around new feature sets
- Quicker adoption or hybrid cloud/cloud only IAM adoption
- Planning basis for any required business change

### Timescale:

Appropriate for smaller business, but better fit with larger business (500 seats plus)

- 5 – 10 day engagement
  - 1.5 – 5 day analysis
  - 3 – 8.5 days report writing
  - 0.5 days presentation of findings
- Can include AD, AAD or both
- Can be further scaled for enterprises with 2000 plus seats, but needs to be scoped individually

### Deliverables:

Documented report outlining metrics RAG-type analysis detailing:

- Physical AD architecture/components
- AD build (OU structure, GPO, object management etc.)
- AAD architecture
- Azure security components
- Security considerations
- Remediation/upgrade recommendations

**Cost £4,950 – £9,900**
