

Office 365 Security Check

Quantitative and Qualitative review of live Office 365 environment using automated analysis tooling, inspection and consultative assessment, and comparisons against best practice standards

Who is this for?

- New customers with O365 – use as lead/taster
- Existing customers with O365 – include regular assessment within managed service or as regular billed service

Timescale:

- Appropriate for all sizes of O365 implementations
- 3 day engagement:
 - 1 day analysis
 - 1.5 days report writing
 - 0.5 days presentation of findings and next steps
- Can be scaled down in small environments or scaled up in large environments

Customer Benefits:

- Independently audit technology implemented internally or by a 3rd party
- Identify areas of weakness/ needing improvement
- Increase your knowledge of changes and improvements made to technology since implementation or last review

Deliverables:

- Identification of security responsibilities
- Analysis of current Microsoft SecureScore
- Test against the 14 NCSC principles for:
 - IAM/MFA/Cloud Access
 - Devices/Offline Content
 - Auditing
 - External sharing
 - Encryption
 - Licensed EMS/ATP features
- NIST_800/ISO27001 controls audit
