Know Where You Stand

Even with Microsoft 365's advanced security and AI capabilities, most organizations struggle with limited visibility into their true security posture. Hidden gaps, unused controls, and unmanaged AI usage often lead to risk.

Matrix3D's Microsoft 365 Security Assessment provides a clear, actionable view of your security and AI risks, helping you identify weaknesses, validate what's working, and prioritize the actions that matter most.

When you should go for this Assessment

Before a Major Initiative

Planning a cloud migration, merger, or digital transformation? Understand your security baseline before you begin, ensuring new initiatives don't introduce unnecessary risk.

After an Incident

Experienced a breach or close call? Get an objective evaluation of your defenses to identify what failed and prevent future incidents.

Compliance Requirements

Facing an audit or new regulatory requirements? Verify your compliance posture and identify gaps before auditors do.

Periodic Health Check

Security isn't static. Regular assessments ensure your defenses keep pace with evolving threats and your growing organization.

Comprehensive Security Evaluation

Our assessment examines every critical dimension of your Microsoft 365 security environment. We go beyond automated scanning to provide expert analysis of your actual risk exposure.

Critical Security Domains

Identity and Access Control Authentication, conditional access, MFA, privileged access, and app permissions	Device and Endpoint Security Endpoint security, device compliance, MDM, encryption, and updates	Email and Collaboration Security Email and collaboration security, phishing protection, and external sharing controls
Information Protection Data classification, protection, DLP, encryption, and information barriers	Threat Detection and Response Threat detection, investigation, automated response, and incident readiness	Compliance and Governance Regulatory compliance, retention, eDiscovery, and privacy controls
Cloud Application Security Cloud app security, API protection and Shadow IT.	Security Architecture and Configuration Security architecture, tenant configuration, and integrations	AI Security and Copilot Governance AI governance, Copilot data security, and oversharing prevention.

Our Assessment Methodology

Matrix3D's assessment combines automated analysis with expert human review. This hybrid approach identifies both obvious configuration issues and subtle architectural weaknesses that automated tools miss.

How we do

Matrix3D's assessment combines automated analysis with expert human review. This hybrid approach identifies both obvious configuration issues and subtle architectural weaknesses that automated tools miss.

Total Duration: 7-11 business days from kickoff to final presentation

What you Receive

Our assessment delivers actionable intelligence, not just raw data. You'll receive comprehensive documentation designed for both technical teams and executive stakeholders.

Why Organizations Choose This Assessment

Executive Summary

High-level overview with overall risk rating, key findings, and recommended immediate actions. Written for board-level communication.

Security Posture Dashboard

Visual representation of your security maturity across all eight domains at a glance.

Detailed Findings and Evidence

Comprehensive documentation with technical details, screenshots, and specific evidence supporting each finding.

Risk Assessment and Prioritization

Each finding rated by severity and business impact. Clear prioritization for addressing critical risks first.

Remediation Roadmap

Step-by-step guidance with configuration instructions, policy templates, timelines, and resource requirements.

Industry Benchmarking

Comparison against industry peers and Microsoft best practice baselines.

M365 Security Best Practices

Recommended configurations aligned with Industry security frameworks. Practical guidance tailored to your business needs.

Why Choose Matrix3D?

Not all security assessments are created equal. Matrix3D brings unique expertise and a proven methodology that delivers actionable results, not just checkbox compliance.

Certified Microsoft Security Specialists

Our assessment team consists entirely of certified Microsoft security professionals with deep platform expertise. We don't just read Microsoft documentation—we architect, implement, and operate these technologies daily for enterprise clients.

Real-World Experience

We've secured Microsoft 365 environments across industries from financial services to healthcare, from startups to global enterprises. This breadth of experience means we recognize patterns, understand context, and provide recommendations that actually work in production.

Business-Focused Analysis

We don't just report technical findings—we explain business impact. Every recommendation considers your operational reality, budget constraints, and risk tolerance. No cookie-cutter checklists; every assessment is tailored to your situation.

Actionable Recommendations

Our reports include specific implementation guidance, not vague suggestions. You'll receive configuration examples, policy templates, and step-by-step instructions that enable immediate action.

No Sales Pressure

We provide objective analysis and honest recommendations. Whether you implement changes internally, engage our team, or work with another provider, our only goal is helping you improve security.

Take the First Step

Initial Consultation

Proposal and Engagement

Assessment Execution

You can't improve what you can't measure. Start with clarity on where you stand, then build a roadmap for continuous security improvement.

What We Need From You

- Read-only access (Security Reader or Global Reader role)
- Brief business context and priorities
- Kickoff meeting (1 hour) and final presentation (1-2 hours)
- Any existing security documentation for context

Typical Timeline: 2-3 weeks from engagement to final report
