

Powering the Enterprise with Secure and Scalable Gen AI

What We Do

Maven AGI builds and deploys AI agents for companies like Tripadvisor, Rho, and ClickUp, enabling them to autonomously manage inquiries and drive efficiency across a wide range of business functions, including Support, Success, Sales, and IT. Our platform securely connects fragmented systems and integrates diverse knowledge sources to deliver accurate, personalized responses—all without costly system changes. With Maven, enterprises can quickly and securely implement Generative AI, while mitigating risks like hallucinations, compliance issues, and security vulnerabilities.

Enterprise-Scale Impact

Resolved millions of inquiries in 50+ languages

Up to 93% customer inquiries resolved autonomously

Up to 81% cost savings in support, success, and customer facing functions

60% reduction in average resolution time

50+ integrations with ticketing systems, knowledge providers, & more

Solutions and Capabilities

Agent Designer: Design, train, and deploy agents with no coding, maintaining full control to customize the model for unique needs.

Agent Maven™: Instantly answers customer questions, maintaining brand tone and freeing human agents for complex cases.

Maven Co-Pilot: Helps agents provide quick, high-quality answers through AI-driven suggestions, integrated with platforms like Salesforce, Zendesk, Freshdesk, Slack, and HubSpot.

Agent Insights: Provides a real-time overview of agent performance, identifies knowledge gaps, and offers actionable insights to enhance customer experience.

Extensible Platform: Add new features or integrations through a secure programming model, available via the Maven App Directory. Maven's platform easily integrates with existing workflows to have customers up and running in weeks.

Secure Knowledge Management: Ensures robust internal and external access controls, secures PII, and maintains compliance by addressing knowledge gaps and system access.

Our Founding Team

Maven was founded by industry veterans from HubSpot, Google, and Stripe, bringing over 60 years of combined experience in AI, customer success, and GTM. They have assembled a top engineering team from Google, Meta, Amazon, and Stripe to develop Maven's AGI technology. Backed by top AI investors including LUX, M13, E14, and Mentors Fund, Maven also has support from industry leaders at OpenAI and Google.
