Real-Time Asset Monitoring

A dynamic and data-driven approach to track and analyze assets such as machinery and equipment. With these real-time insights, operators can make data-driven decisions, allocate resources efficiently, and drive continuous improvement by reducing unplanned downtime and maximizing equipment uptime

Overall Equipment Effectiveness

Performance Monitoring

OEE allows comprehensive measurement of machine performance, providing valuable insights into the machine's uptime and downtime /critical parameters on the shop floor.

Data Visualization

Visualizing key metrics and critical parameters of the production assets running on the shop floor with plant-level/department-level machines-level real-time production insights.

Digital Job Card Management

Alerts and Notifications

Analyze the runtime and downtime for each machine to track the daily production. Get real-time alerts and notifications on the production trend and key metrics for production.

Paperless Insights

Digitization of manual entry information by the operators such as downtime reasons, quality rejection reasons, and machine breakdowns .

Digital Job Card Management

Overall Equipment Effectiveness

**Industrial OEE: Empowering
Productivity: Maximize Efficiency**
