Fabric Admin-as-a-Service with 2-Day Administration Workshop

Seamless Control and Security in Modern Data Management

Offer Description

Organizations adopting Microsoft Fabric need more than a modern analytics platform—they need **continuous, expert administration** to maintain security, performance, cost efficiency, and operational continuity.

Ensight's Fabric Admin-as-a-Service provides ongoing, full-scope management of your Fabric environment, including governance, security operations, capacity optimization, and proactive monitoring.
This offering also includes a **2-Day Fabric Administration Workshop** designed to rapidly onboard your teams and establish best-practice governance from day one.

Key Features

Fabric Tenant Management

- Monitoring and optimization of tenant configuration

- Implementation of Microsoft-aligned governance and security standards

- Continuous updates as new Fabric capabilities are released

Capacity Monitoring & Performance Optimization

- Daily and weekly CU consumption tracking

- Throttling and workload efficiency analysis

- Cost management recommendations

Governance & Security Operations

- End-to-end DLP management, sensitivity labeling, workspace lifecycle rules

- Permission and access model standardization

- Domain and workspace architecture oversight

Operational Monitoring & Response

- Proactive issue detection using Metrics App, FUAM, workspace health checks, and gateway monitoring

- Alerting and incident response

- Daily operational oversight by Ensight experts

2-Day Fabric Administration Workshop

- Accelerated technical onboarding session

- Tenant-specific governance assessment

- Environment analysis

- Initial risk report + improvement recommendations

What's Included (Deliverables)

✔ Monthly operational management of your Fabric tenant
✔ Capacity & performance monitoring
✔ Governance and security configuration updates
✔ Workspace, domain, and access model administration
✔ Issue detection, alerting, and incident response
✔ Monthly improvement roadmap
✔ 2-Day Fabric Administration Workshop (remote or on-site)

Customer Benefits

- Production-ready security, governance, and operational controls

- Reduced capacity costs and optimized CU usage

- Earlier detection of performance and configuration issues

- Less administrative workload for IT teams

- Stronger governance and controlled data access

- Continuous adoption of new Fabric features

- A sustainable, compliant, and scalable analytics environment

In short: Your organization doesn't just use Microsoft Fabric - it operates it in the most effective, secure, and efficient way possible.

Why Ensight?

Ensight is a Microsoft Solutions Partner specializing in advanced analytics, Fabric architecture, and enterprise-scale data platform operations.
Our team brings deep hands-on experience in governance, tenant administration, capacity optimization, and operational monitoring within complex Fabric environments.

We deliver solutions that are scalable, secure, and aligned with Microsoft best practices-enabling organizations to unlock the full value of Fabric.
