

Mediguard Technologies Sp. z o.o.

Telemedicine services for medical industry

Challenges

Lack of proper resources and innovative solutions regarding medical care due to decreasing number of specialists in opposition to increasing number of people in need of professional medical care.

Widely available statistics

Solution

Addressing the need for telemedical services in regard to remote monitoring (diagnostic tests), collecting obtained data and their instant analysis.

Available both specialist's opinions and statistics

Expected results

The answer for these problems is Mediguard platform which allows:

- Automatic data collection
- Safe storage of the collected results and presenting them in selected way after the analysis
- Saving money and resources

Specialist's public opinions

The platform as Mediguard Telemedicine System

By offering fast, safe and simple monitoring of the state of the Patient's health we help to effectively diagnose and treat which improves the society's quality of life.

Innovation

Solution's value

- Diagnostic devices integrated with mobile app and the system
- Fast patient's accounts creation process and direct access to examination results

Ease of implementation

Solution's value

- System openness
- Fast process of integration with other systems and devices

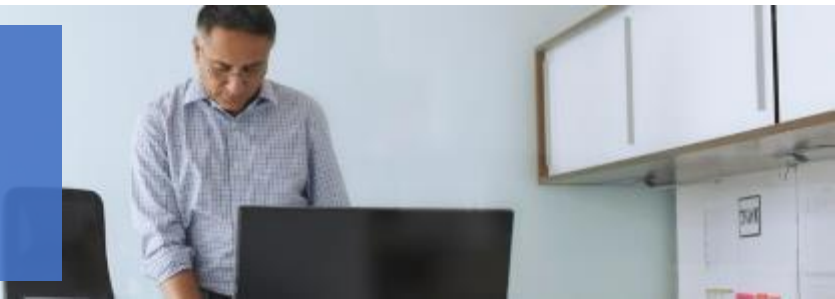

Safety

Improved quality of the solution in cooperation with Microsoft

- Using the solution of Azure cloud
- Automatic data collection is constant and fault-free

Our target client group are medical facilities. Given the arguments presented above our current clients, e.g. Western Hospital in Grodzisk Mazowiecki, Medical University of Lodz, Pomeranian University in Slupsk have agreed or successfully continue to cooperate with us in order to use innovative, effective and reliable solution for conducting examinations and collecting data.

Mediguard + Mediguard Telemedicine Platform

Currently the Healthcare system is facing many problems related to accessibility to diagnostic tests. Thanks to cooperation of Mediguard and Microsoft one solution in a form of telemedicine system has many advantages which influence quality, safety and innovativeness of the provided service. Mediguard provides platform, application and devices for simple and automatic testing process alongside with data aggregation which are essential for following changes in current trends and analysis.

Solution Alignment

Guaranteed safety

Assurance of safety thanks to the support of a group of experts and proactive compliance functions which are trusted by all the Clients. There is no doubt that the Azure cloud is trustworthy and reliable.

Increased scalability

Positive impact on solution’s efficiency and system’s smooth operation under conditions of constantly increasing number of users and growing amount of processed data.

Comprehensiveness

Mediguard telemedical solution includes simple, safe and reliable data storage and analysis at any time and place. This allows planning in all areas of operation.
