Hospital

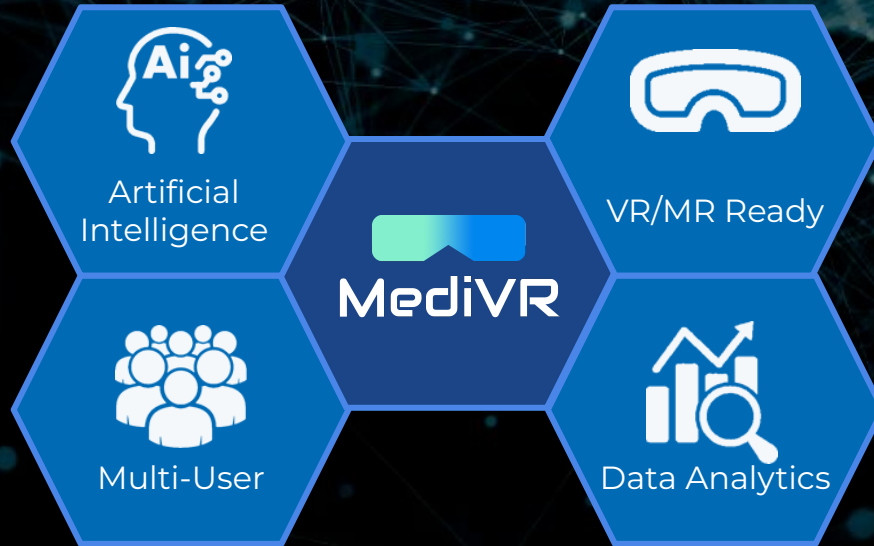

Medical Device Companies

Integrating Technology for a Reimagined Healthcare Education

Combining technologies to create the best learning experience

Dr Gabriel Liu
Head & Senior
Consultant
NUH Spine Centre

Benefits

- 1** | **Up to 95%** time savings in creating scenarios*
- 2** | **30%** time savings in training time, average savings of \$88 per labor hour#
- 3** | **60%** increased task efficiency, knowledge acquisition & retention
- 4** | **10x** more scenarios per disease
- 5** | **80%** agree that program is beneficial for learning*
- 6** | **>90%** response accuracy*

* Based on 40 user tests conducted on year 1-5 medical students

Based on Forrester's "The Total Economic Impact™ Of Mixed Reality Using Microsoft HoloLens 2"

MediVR Orthopedic Pilot Study

MediVR's AI-Powered Virtual Patient

Patient History

- Reflects real world statistics (eg. dementia and age)
- Reflected in all aspects of the patient's presentation

Conversation

- Patient wants to convey their symptoms and pains, expects doctor to understand and help solve their problem
- Hidden intents that doctors have to dig into*

Physical Symptoms

- Show accurate patient physical characteristic (pregnant)
- Realistic movements/animations (limp, gait of a scoliosis patient)
- Rare conditions

Behavior and Reaction

- Patient expresses themselves
- Emotions (ie. upset, distraught, expectations not met)*
- Expectations and worries addressed*
- Handle sensitive topics*

MediConvoAI

Realistic Conversation with Patients Custom-trained NLP model

Powers all Virtual Patients to process medical dialogue

- Full Patient History Taking
- Understands Open Ended Questions
- Intelligent Intent Recognition
- Uncertainty & Clarification System
- Asking for Patient Permission
- Express Patient's Concerns

* Features coming soon

MediConvoAI

Able hold a full patient history conversation:

1. Patient's personal information
2. Presenting symptom
3. History of the presenting illness
4. Drug and treatment history
5. Past history
6. Social history
7. Family history
8. Systems review

MediCreator

Doctors have the power to create realistic Virtual Patients with us

Multiple variations from 1 medical scenario:

- Greater Replayability
- Varying Difficulty Level

Share your Case Notes & Scenarios

CREATE SCENARIO 

NAME	Ah Meng	SURNAME	Tan
AGE	67	GENDER	Male
RACE	Chinese	SPOKEN LANGUAGE	Mandarin
WEIGHT	70 kg	HEIGHT	170 cm
DISEASE	Select disease		

MediVR's Specialised Tools

AI Conversation

Industry Standard Animations
Natural Interaction

MediVR's Virtual Patient

Speak
Examine
Treat
With Medical Accuracy

MediCreator Example

Disease: L4/5 Spondylolisthesis (Lower back pain)

- Symptoms: **Similar**
- Onsets/Triggers: **Similar**
- Demographics: **Different**
- Social/Family History: **Different**

Patients Generated by MediVR's SSG

**Leads to Different Differential Diagnoses
&
Affects Management Plan**

MEDIVR's MIXED REALITY & VIRTUAL REALITY

AI Virtual Patient

Manage Difficult Situations

Learn to manage difficult situations with patients. Improve confidence and interpersonal skills.

Multiple Virtual Patients

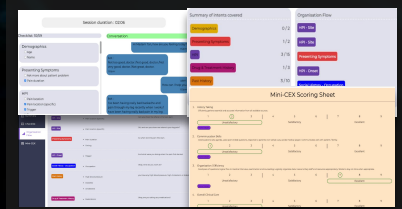

Learn to prioritise and manage multiple patients in a flexible and dynamic environment

Real-time Controller

Customize parameters of the scenario in real time, on top of pre-set scenarios

Advance Assessment

Standardise and reduce assessor bias with objective data analytics
Track user improvement over time and recommend improvements

Medical Education Applications

Virtual Cadaver/Anatomy

Replicate any human anatomy without the need for expensive Manikins or rare to find Cadavers

Realistic Lessons in Classroom

Bring our Virtual Patients into the classroom and guide your students to engage & learn.

Self Directed Learning

Learning can take place anytime anywhere. A pandemic proof solution the medical education needs.

Global Collaboration

Medical professionals can collaborate with each other from anywhere in the world. Interdisciplinary training is easier than ever.

Clinical Application & Use-Cases

Surgical Planning

- Medical field agnostic surgical planning in 3D MR
- Automatic 3D visualization using real world unique patient medical scans

Remote Expert Consultation

- Remote telehealth or teleconsultation with specialists
- Remote surgical planning and collaboration
- Virtual Rounds
- Medical Metaverse

Patient Education

- Enhance procedure comprehension
- Reduce procedure anxiety
- Increased patient satisfaction
- Improve patient consent

Training Guides

- Create interactive training modules for procedures
- Enable physicians anywhere in the world to leverage your unique approach to complex procedures for training & education

MediVR Scenarios

COVID Swab Supervisor

Clinical Examination

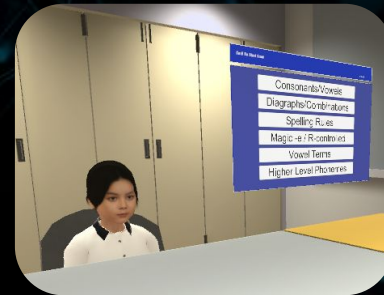

Physical Examination

Ophthalmology Examination

Paediatrics Respiratory Distress

Literacy Training
