# Power Platform

## Governance & Adoption

The organizations have needs to rationalize and develop existing business processes by automating and streamlining their operations. Microsoft Power Platform technology is an answer for business to create solutions efficiently for that need.

It's not only the IT units that create solutions, but now also business stakeholders can innovate and develop solutions that make their everyday work life easier, decrease manual work and improve employee experience by giving the opportunity to focus on more business-productive and important work tasks.

# How can we help organizations to digitize their business processes by Power Platform?

We help organizations to automate and streamline their business processes with Power Platform. In Power Platform Governance & Adoption we focus on creating a clear governance model, providing inspiration of the possibilities of the low-code technology and plan concrete steps for organizations to utilize more Power Platform in their processes. As a result, we create a common vision of what Power Platform aims to achieve, consistent development practices and an adoption roadmap towards to the vision.

Our way of working is based on interactive and concrete workshops and active communication throughout the project. Engaging stakeholders around the organization enables us to find ownership for Power Platform and get more people interested in low-code technology and the benefits it can bring. We place high demands not only on ourselves but also our customers, and our work requires active participation in workshops, as well as the ability and willingness to make decisions.

The work consists of interviews and workshops, during which we create a common vision of what Power Platform aims to achieve, consistent development practices across the organization and roadmap to adopt Power Platform as agreed in the vision.

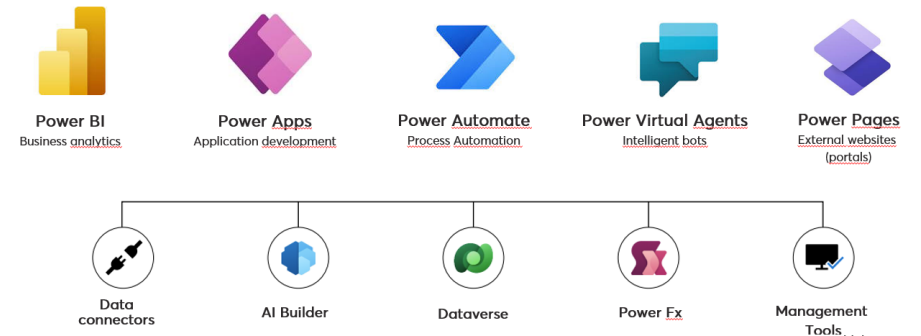

# Power Platform Governance & Adoption

Power Platform has a lot to offer, but it needs to be deployed in a controlled way to get the most out of it. The purpose of the Power Platform Governance & Adoption model is to ensure the efficient, secure and controlled use of Power Platform technologies in the organization.

It is extremely important also to implement the Governance & Adoption model into use, systematically identify opportunities to utilize the Power Platform and create an operational model in practice.

## Microsoft Power Platform

Low-code development platform, expanding Office 365, Azure, Dynamics 365 solutions and enabling completely new solutions to be created agilely in other environments as well

# Power Platform Governance & Adoption

## Way of Working

### Project Agenda

### Customer Benefits

### Project Deliverables

**Interviews for Assessment:** Key Business representatives/known low-code experts are interviewed to have knowledge about the current use of Power Platform

#### **Workshop: Strategy & Vision**

To create a common vision for Power Platform and the benefits it seeks. Define roles, responsibilities and goals.

#### **Workshop: Monitor & Manage**

Create needed resources, practices and monitoring environments.

#### **Workshop: Support**

Create instructions and processes to support development.

- Governance & Adoption model creates commonly agreed operating model for utilizing the platform and describes the role of the platform as a part of enterprise architecture
- Organization can ensure that Power Platform technology is used in efficient, secure and managed way in the whole organization
- With the help of concrete action plan and roadmap, organization has clear steps towards vision state

- A prioritised and validated adoption roadmap towards to vision
- Instructions and documentation of agreed development practices
- A common vision of what the Power Platform aims to achieve and what benefits it can bring to customer organization
- Agreed on consistent development practices across the organization so that all applications in the organization are created in a consistent manner

# Thank You
