

DOMAIN & DNS SECURITY SOLUTION – DNS – EMAILS – MESSAGING

Our patented French solution helps you map your domains, implement DNS and email security protocols. Improve and simplify the monitoring of your DNS security. Whether you have 1 or 10,000 domains, whether you send 10 emails per day or 10,000,000, Merox is the reference solution for optimising your DNS entries and email deliverability.

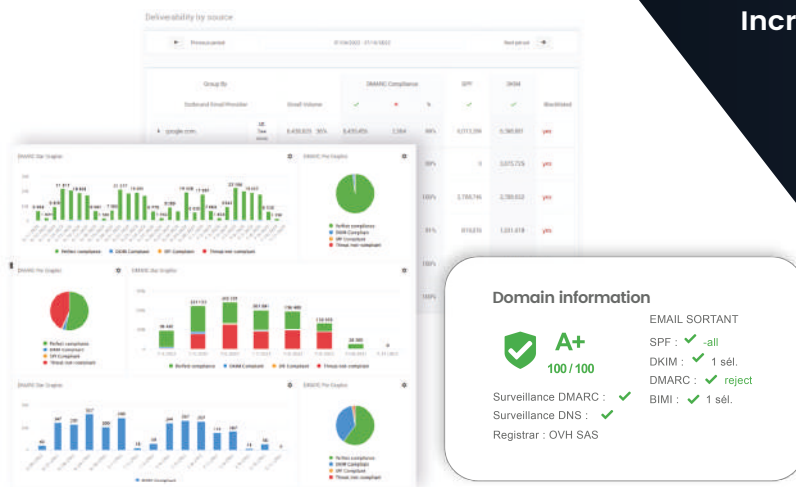

Are you protected against Domain Spoofing?

Gain visibility and manage your domain and DNS environment

Increase your technical and legal compliance level, reassure your customers & partners

Improve your email deliverability and brand visibility

Prevent identity theft for spoofing / phishing attacks

TEST YOUR DOMAIN NOW FOR FREE (IT TAKES LESS THAN 10S)

My domain is spoofable!

Anyone can impersonate you by writing an email with @yourdomain.com.

You have not implemented the DMARC protocol or your DMARC protection policy is set to "None"

My domain is protected!

Make sure you do not block legitimate emails by using a DMARC scanning tool.

Your DMARC protection policy is set to "Quarantine" or "Reject".

ABOUT US

Merox is a French software company established by a team of former consultants who are experts in cybersecurity and messaging systems in order to assist technical teams in the compliance of their domains. The platform helps organizations to secure their DNS and domain names (email security, brand and identity protection, monitoring, assistance in implementing security protocols such as SPF / DKIM / DMARC / BIMi / MTA-STS / DNSSEC / DANE...).
