UPGRADE YOUR LEGAL PROCESSES WITH GENERATIVE ARTIFICIAL INTELLIGENCE

Generative AI impact in the legal industry

The revolution of **Generative Artificial Intelligence** has paved the way for new working tools capable of radically changing the way we work. The opportunities that this transformation brings to the **legal industry** are exciting.

But what is the current state of technology in Italy today?

No global players (AI, Microsoft, Google, etc.) are interested in launching specific products for the legal sector.

The use of AI must ensure high-quality standards, operating exclusively on a selected (and controlled) base of legal knowledge.

Generalist tools like Microsoft Copilot are designed for individual productivity and do not meet the targeted needs of an entire legal organization.

The few platforms available for the legal market (developed for the US market) are too simplified for complex organizations.

MESA.

MESA's response

MESA has developed LIDIA, the first generative artificial intelligence platform designed by our team of legal experts for large law firms and corporate legal departments.

LIDIA stands out in the market for:

Innovativity

We adopt the best Generative AI models available

Flexibility

LIDIA is not bound to a single technology, but it can adapt seamlessly to future developments in Generative AI models

Customization

Designed to adapt to various legal specializations: M&A, commercial contracts, consulting, compliance, antitrust, tax...

Security

It ensures the client data segregation and that it is neither acquired nor used by the AI models

A story that shaped the future

Lidia Poët was a revolutionary figure who left an indelible mark on the national and international legal landscape.
In 1881, Lidia was the sole woman attending the Law course in Turin, and despite numerous initial rejections, she would later become the first woman admitted to the National Bar Association.

An innovator of her time, Lidia inspired the creation of our Artificial Intelligence product designed to revolutionize the way legal challenges are addressed. LIDIA opens the doors to a future where the efficiency and accuracy of Generative AI seamlessly integrate with human legal knowledge.

A forward-looking tool destined to become essential in the modern legal landscape.

MESA.

Summarization & Analysis

Revolutionize document management with comprehensive support for handling complex legal documents.

Extract key information from documents and obtain the searched-for information, a text excerpt, and page number in seconds.

Generate **bullet-point summaries** and detailed synopses of your documents, cases, and contracts in just a few minutes.

Conduct in-depth analyses and compare documents with ease and speed

Need more? **Ask LIDIA** in a simple conversational chat.

Drafting

Forget the hassle of drafting documents from scratch! Generate legal texts, contracts, letters in line with the highest standards of quality using Generative Artificial Intelligence.

By interacting directly with the **chatbot**, you can request the generation of one or more documents.

You can **customize the content** and structure of the document by answering some key questions

Receive a **draft of the document** complete with all the information

The final **text is ready to be reviewed**, edited, and approved by all authorized users on the platform.
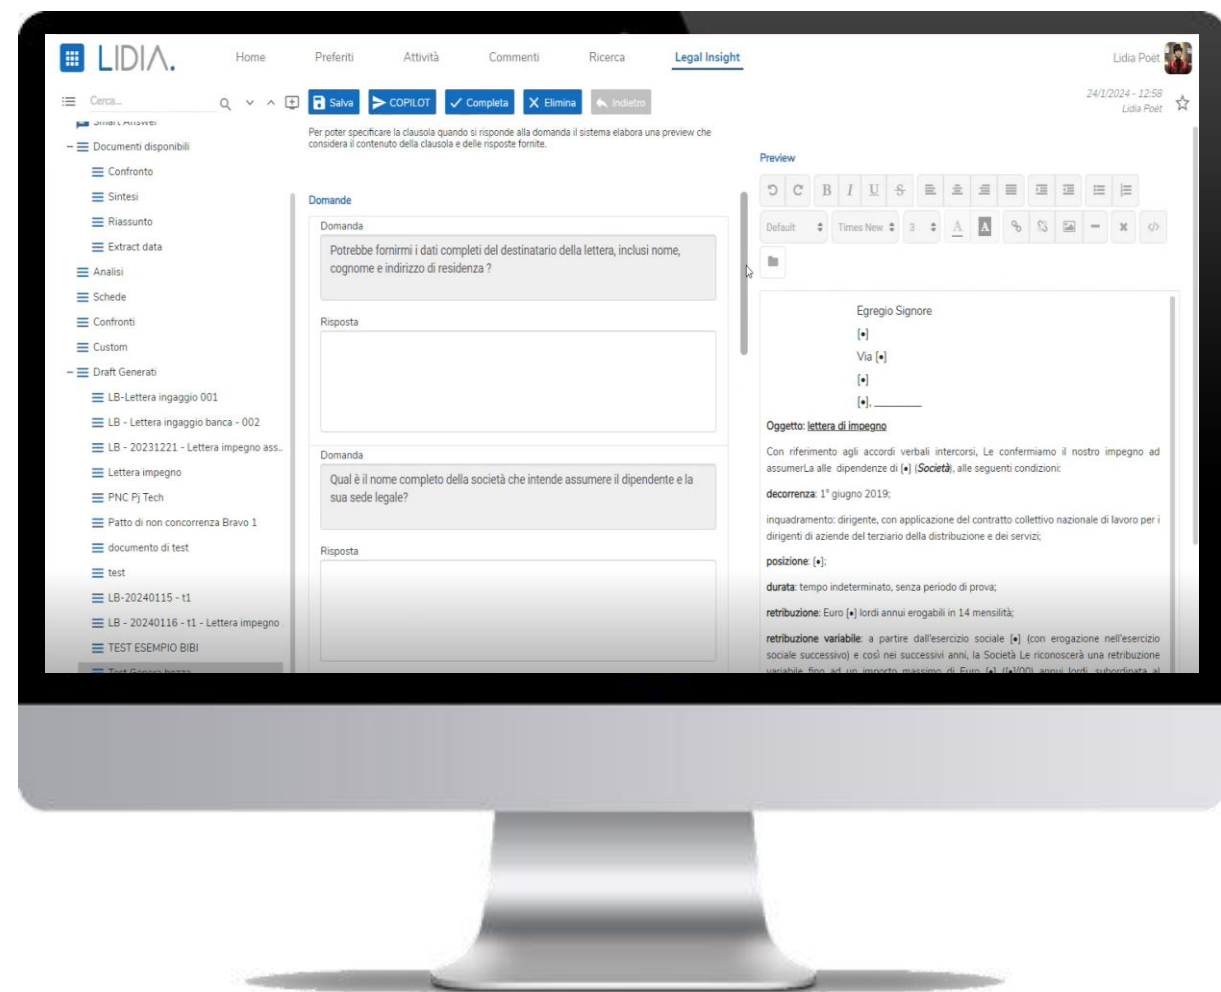

Drafting

Prefer using more familiar tools like Microsoft Word?
No problem!

LIDIA can be integrated into the Office suite, allowing you to draft new documents directly in a Word file!

Legal Assistant

Need a document on the fly or looking for specific information for a client? Ask LIDIA! A smart and collaborative search to enhance your organization's knowledge assets.

LIDIA **categorizes and classifies the entire document system** based on a customized taxonomy.

The chatbot allows for **the direct request** of specific document identification, enabling legal professionals to quickly access the legal knowledge assets of the organization.

LIDIA identifies the most relevant documents to the request and provides the response in the form of a **memorandum,** useful for answering client questions or creating legal opinions or judicial documents.
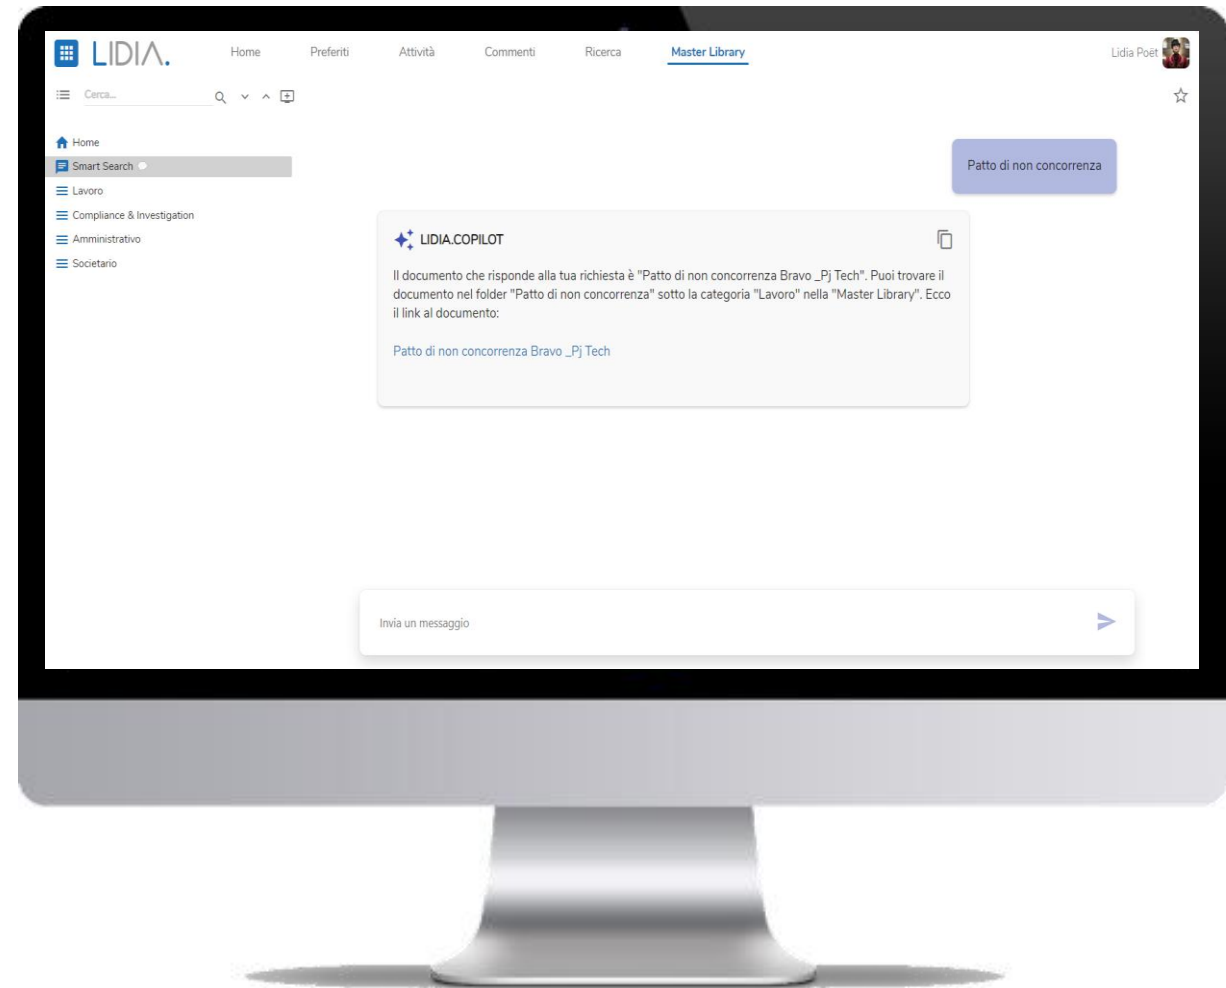

Main benefits

EFFICIENCY AND ACCURACY

Enables fast and precise document analysis, drafting, and research activities.

OUTPUT QUALITY

The use of a controlled knowledge base and high customization of actions ensures relevant results in line with organizational quality standards.

LEVERAGING KNOWLEDGE

The repository of research, opinions, memoranda, contracts, and other master documents becomes the foundation for every new activity.

DATA SECURITY

With the **Segregation by Design approach**, LIDIA ensures the absolute segregation of client data and guarantees that it is neither acquired nor used by AI models.

Unlock the Full Potential with LIDIA!

The maximum advantage of LIDIA is achieved through a knowledge base organization project facilitated by the use of generative artificial intelligence:

+ Optimization of the document system for Legal Assistant **+** Creation of a Master Library for Drafting

LIDIA.

WHY CHOOSE LIDIA

- ✓ A generative AI platform specifically designed for the legal industry

- ✓ A unique team of technology experts and legal professionals.

- ✓ A functional architecture tailored for various legal practice areas and highly customizable.

- ✓ An ecosystem of top-tier partners for Knowledge Management and System Integration components.

- ✓ Assured data segregation and ISO27001 certified security.

MESA.
value innovations

We believe in the speed of results and in unlocking the exponential potential of businesses through generative artificial intelligence as an enabling factor for digital transformation.

MESA, with nearly 20 years of history, originated on the University Campus of Savona from the passion of the three founding partners for technology as a tool to generate revolutionary changes.

In 2020, MESA Group was born with the acquisition of **OVERNET**, formerly Mondadori Informatica Education, a professional training center specializing in IT and managerial areas and the organizer of WPC, the most important Italian conference on Microsoft technologies.

The MESA Group is now the partner of excellence with specialized expertise for digital transformation projects **in ESG, GRC, Finance, Legal, and Education processes.**
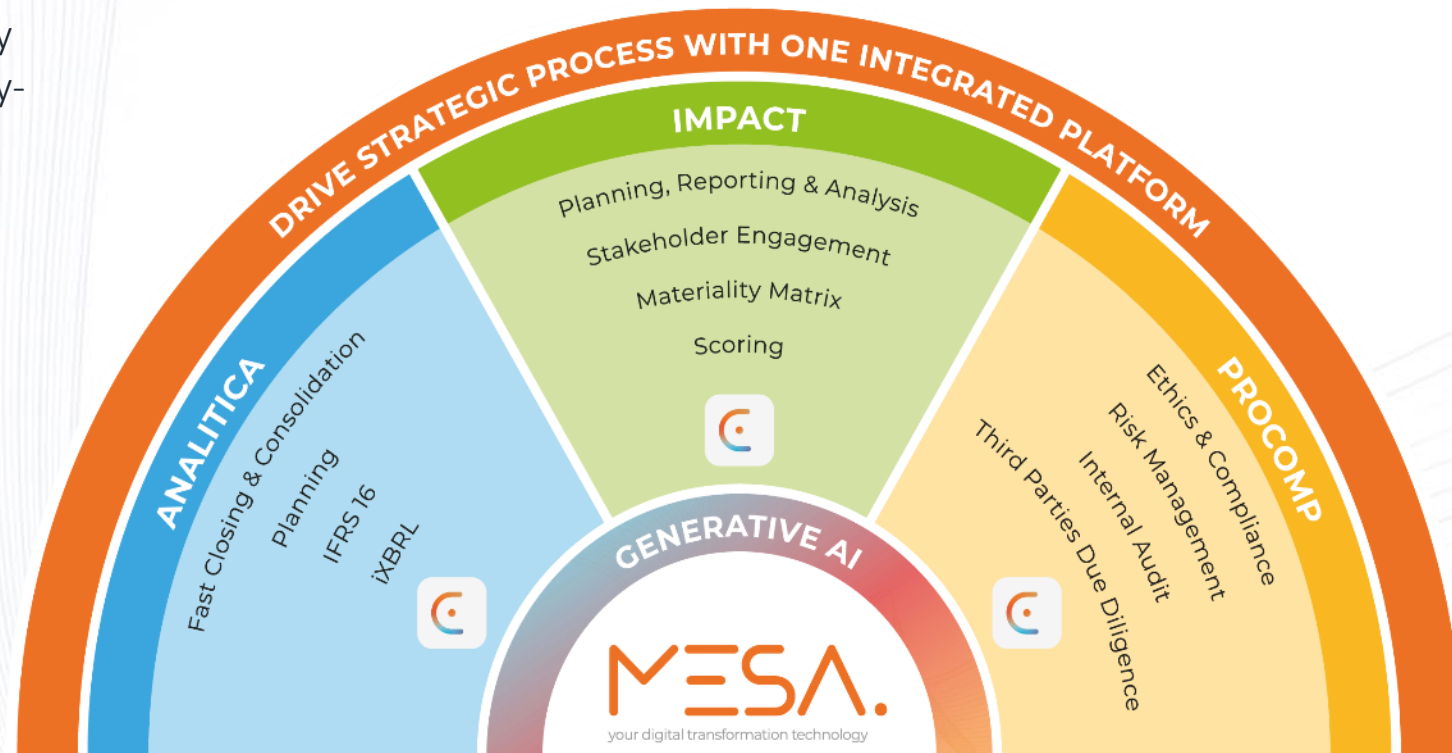

MESA.

MESA: INTEGRATED AND COLLABORATIVE PLATFORM

GOVERNS STRATEGIC PROCESSES AND SIMPLIFIES THE PRODUCTION OF INTEGRATED REPORTING.

An integrated platform consisting of **specialized products** that share with each other the convergence of regulatory and **reporting obligations** based on easy-to-use and ready-to-use technologies.

MESA.COPILOT

The MESA platform is powered **by the MESA.COPILOT generative artificial intelligence engine** that radically transforms the management of ESG, GRC, and Finance processes, reducing time, manual errors, and allowing users to focus only on strategic decisions.
