Mesa Security

Get Insights, Take Action, Protect Users

Attack Types

Attack Type	Count
Spam	25,136
Ransomware	15,988
Malware	9,686
Callback Phishing	9,256
Credential Phishing	3,592
Extortion	3,000
BEC	1,500

Get Actionable Threat Insights

- Analyze the linguistic and behavioral patterns of emails, detecting indicators of phishing, impersonation, and fraud with high accuracy
- Collect live threat intelligence feeds that give us the markers for active and potential threats and their risk to your organization
- Generate detailed analytics and threat reports, providing visibility into attack patterns, affected users, and security gaps

Enable Automated Remediation

- Automatically quarantine malicious emails, block senders, or revoke access to compromised accounts without manual intervention
- Block suspicious logins, revoking active sessions, or forcing password resets to stop attacks before they escalate
- Get clear remediation steps and AI-powered recommendations that are benchmarked against your organization and vertical

Email Remediation
Choose the action from below-

- **Delete Email from Microsoft Inbox** ☑
  Remove the malicious email from the user's Microsoft Inbox to prevent interaction
- **Quarantine Email to Microsoft Compliance Center** ☐
  Move the email to Microsoft Compliance Center for pending review and further investigation
- **Block Sender Email Address** ☐
  Prevent future emails from the specific sender by blocking their email address
- **Block Sender Domain** ☐
  Block all emails from the sender's domain to prevent all potential threats.
