

## **RIGREPORTS**

Cutting-edge daily operational software application for drilling, workovers, completions, and facility jobs. Specifically designed to produce fast and accurate daily reports automatically and on your schedule.

Uses a combination of engineering expertise, data science, and power BI dashboards while delivering the intelligence needed to identify cost trends and operational efficiencies at an early stage. Extremely user-friendly, one-source data control, company-wide accessibility, improves efficiencies, and increases productivity. Proven time savings, 30-45 minutes per day, per user.

### **Professional reports with unlimited:**

- Unlimited Automated distribution lists
- Unlimited Wells
- Unlimited AFEs
- Unlimited Contacts
- Unlimited Report Schedules
- Unlimited Report Deliveries
- Unlimited Users

## Differentiators

- Delivers seamless, automated daily reports
- Produce precise professional reports
- Intuitive data entry with carry-forward
- Companywide platform, which enhances collaboration and productivity throughout the company
- Simple and straightforward user interface; minimal to no training
- Increases productivity
- Make informed decisions faster
- Improves the overall experience for all users
- Eliminate data-loss and formatting issues (saving time)
- It saves at least 30–45 minutes per day, per user
- All operations, cost data, historical lookbacks, and analytics are accessible through a single point of entry.
- Ability to compare multiple wells
- Ability to query spending for analysis
- Ability to attach images and files, stay with job history and/or send with reports

## Analyze costs and operational efficiency

- Powerful dashboards, performance analysis, cost trends and comparisons.
- Perform rapid analysis, identifying cost trends, budgets, outliers, lessons learned, and future projects
- Easily Spot Inefficiencies
- Query and/or compare all jobs and wells
- Easier to compare efficiencies and actuals to budgets.
- Allows analysis of how costs are allocated
- NPT is recorded and displayed on reports.

## Support

- Interactive user guides and searchable knowledge base
- In-app chat support
- Designed, developed and supported by our Houston-based team of software and petroleum engineers
- Data Security:
  - Your data is safely stored in an encrypted dedicated SQL database in our secure data center
  - Store an updated copy of your database on premise if needed, or receive full backups

## Faster reporting

- Simple user interface and easy-to-follow structure
- Seamless automated reports with daily time-specific delivery
- Consistent reporting metrics to key stakeholders with reduced effort.
- Capture data once and carry it forward.
- saving time, removing copy and paste, and reducing human error
- Eliminate collating (sorting) from multiple sourced data to create stakeholder reports in an efficient manner
- Eliminate data-loss and formatting issues (saving time)
- Built-in tools to import directional surveys and other data
- Carry-forward features save time and frustration

## Reports

- Multiple report formats
- Option to approve reports
- Unlimited distribution groups

## Onboarding

- 24-hour onboarding process
- Accelerate the onboarding process by importing your data, including:
  - Accounting cost codes
  - Well and field information
  - Users List
  - Vendors List

## Optional Customization

Additional services are available at an hourly rate or quoted based on overall project needs.

- Custom Integrations with third-party applications
- Custom Data Services, Historical Data Imports and Exports
- Customized Reports and Charts creation
