

# Micromine Nexus system requirements

Micromine Nexus is a user-friendly data and task management solution built for mining teams.

For optimum Micromine Nexus performance, your infrastructure and computer system should meet the recommended configuration requirements outlined in this resource.

Clients need to ensure they are running the latest Micromine Origin and Beyond version to take advantage of the in-product integration with Micromine Nexus. For Micromine Origin and Beyond system requirements, please refer to our online [requirements page](#).
