What's included

The Creator Kit is distributed in three managed solutions, each containing unique components:

Display name \checkmark		Name \checkmark
CreatorKitReferences (MDA)	÷	CreatorKitReferencesMDA
CreatorKitReferences (Canvas)	:	CreatorKitReferencesCanvas
Creator Kit	÷	CreatorKitCore

All controls and components included in the kit use the <u>Fluent UI</u> framework to help easily create consistent, beautiful, and effective user experiences for custom business applications.

Creator Kit (CreatorKitCore)

A solution that contains the core components of the Creator Kit:

	A 11	(10)	
o —	All	(19)	
	/ 11	()	

Apps (0)

🔄 Chatbots (0)

 $_{\rm D}$ Cloud flows (0)

- Component libraries (1)
- Abc Custom controls (18)

÷ Dialog ÷ Header ÷ Search Box Custom Icon ŝ . **Expand Menu** ŝ Panel ÷

See the <u>control reference</u> for all updated controls and their status.

You will notice some components are marked as preview or experimental. Preview is tagged for controls added recently, and experimental is if an underlying platform capability a

component depends on is not generally available (e.g., canvas components are not supported in custom pages).

Reference Solutions

These solutions provide templates and utilities for building with Creator Kit components in canvas apps vs custom pages (embedded in Model Driven apps).

CreatorKitReference (MDA)	CreatorKitReference (Canvas)
Contains references for developing Model Driven apps	Contains references for developing canvas apps
with custom pages and the Creator Kit components. A standalone Power Platform license is needed to play	with the Creator Kit components. A standalone Power Platform license is not needed to play these
these assets.	assets.
Includes the Reference App (shown in the screenshot below) and a custom page template.	Includes a Reference App, a canvas template app, and a Fluent Theme Designer app.

Creator Kit Reference App (click image for animation)

Each reference solution contains a reference application that lets you interact with each component and see the underlying formulas that render it. It's a great way to quickly learn how the components behave and are implemented.

Real world scenarios

Custom Outlook Panel

The kit components were used created a flyout experience in the Outlook web app using the Panel, Elevation, and Icon controls. Posted by <u>Mats Necker</u>.

Creator Kit components being used in a custom Outlook Power App

"As someone coming more from a developer background the Creator Kit is amazing for me, it speeds up my canvas app development/design while making my apps look A LOT more professional!"

Mats Necker

Get Started

Start using the Creator Kit by reading the setup instructions.

Support

Report bugs in our <u>GitHub repository issues</u>. Our team will triage issues with the Creator Kit components. See our <u>support documentation</u> for more guidance.

Feedback

We host our backlog in the GitHub repository to make our roadmap publicly available. We largely depend on community feedback to prioritize feature development and continued investment in the kit.

Upvote (() backlog items you would like to see in the kit next to help our team determine the demand for each component. Work that is committed will be associated with a specific release.

You can also submit a feature request if the backlog does not have the Fluent UI components or capabilities you need.
