Focused Areas

Azure Infrastcture

Azure Cloud Infrastructure related solution deployment, management and performance optimization

Modern Work

Redefining the way employees work through collaboration using Microsoft Teams, Sharepoint, and M365 Apps.

Security

Improve the security posture using Microsoft EDR solutions such as Microsoft Defender and Sentinel.

Azure Data and AI

Identify the hidden trends in the data from various sources to improve efficiencies while understanding bottlenecks.

Business Application

Streamline business operations, manage data, and improve efficiency and customer experience using data driven decisions.

Digital & Application Innovation

Drive the next wave of business growth through digital transformation and cloud-driven services

MIT ESP Professional Services

Azure Infrastructure

Azure Infrastructure offers a vast array of cloud services and resources that organizations can use to build, deploy, and manage their IT infrastructure and applications. These services encompass virtual machines, networks, storage, databases, and much more, providing flexibility, scalability, and robust security features. Azure Infrastructure empowers businesses to harness the benefits of cloud computing for enhanced agility, cost-effectiveness, and innovation in their digital operations.

MIT ESP embraces the power of Azure Infrastructure and provides various services built on it to help customers thrive in their digital transformation and cloud journey. A team of certified engineers will help organizations from planning to deployment and then managing their cloud environments to gain maximum out of their cloud investments.

Services Provided by MIT ESP:

- **Consulting and Assessment:** Assess an organization's current IT infrastructure and business goals to determine how Azure can best be utilized. They provide consulting services to create a cloud adoption strategy.
- **Architecture and Design:** Design Azure solutions tailored to the organization's specific needs. This includes designing network architectures, data storage strategies, and application deployment models.
- **Migration and Deployment:** Assist in migrating on-premises systems and applications to Azure. They help with the deployment of virtual machines, databases, and other resources in the Azure cloud.
- **Integration Services:** Integrate Azure services with existing on-premises systems, ensuring seamless data flow and interoperability.
- **Monitoring and Management:** Provide ongoing monitoring and management of Azure resources to ensure optimal performance, security, and cost control.
- **Training and Knowledge Transfer:** Provide training and knowledge transfer to the organization's IT teams, enabling them to manage and maintain Azure resources effectively.
- **Cost Optimization:** Assist in optimizing Azure spending by implementing cost management and optimization strategies.

About MIT ESP

Millennium IT ESP (MIT ESP) is a complete enterprise solutions provider with a strong footprint in the local and global arena for over two decades. The extensive portfolio includes infrastructure and platform solutions, cyber security solutions, cloud services, enterprise applications, intelligent automation and data, smart buildings, and managed services. Our combination of deep industry expertise, a digital-first mindset, and flawless execution has led to many successes across multiple sectors like telecommunications and media, banking and finance, manufacturing and retail, and government. MIT ESP is committed to delivering customized, resilient, and scalable solutions to accelerate innovation so you can re-imagine and re-invent your business.

MIT ESP Professional Services

Modern Work

Microsoft Modern Work is a suite of tools and technologies designed to enhance workplace productivity and collaboration. It includes solutions like Microsoft 365, which offers a range of productivity apps like Word, Excel, and Teams, enabling remote work, real-time collaboration, and communication. This suite empowers organizations to embrace flexible work arrangements and seamlessly connect employees regardless of location. It also emphasizes security and compliance, ensuring data protection and adherence to regulatory standards in the modern workplace.

MIT ESP supports organizations to identify which areas can be improved by aligning with Microsoft Modern Work concept and guide them to implement solutions to achieve their goals in terms of productivity and efficiency improvements.

Services Provided by MIT ESP:

- **Deployment and Migration:** Assist in deploying Microsoft 365, configuring user accounts, and migrating email, files, and applications to the cloud.
- **Integration:** Integrate Microsoft 365 with other on-premises or cloud applications, creating seamless workflows and data synchronization.
- **Mobile Device Management (MDM):** Implement MDM solutions to manage and secure mobile devices accessing corporate resources.
- **Telephony and Communication Integration:** Integrate Microsoft Teams with phone systems, enabling telephony and unified communications.
- **Azure Integration:** Integrate Microsoft 365 with Azure services to expand capabilities, such as Azure Active Directory for identity management.
- **Customization:** Customize Microsoft 365 applications to align with an organization's unique processes and requirements, including creating custom SharePoint sites or Power Apps.
- **User Training and Adoption:** Offer Training and change management services to ensure users are proficient with Microsoft 365 applications and fully embrace the new tools and collaboration methods.

Security

Microsoft Security is a comprehensive suite of tools and services designed to safeguard organizations' digital assets and infrastructure. It includes solutions such as Azure Security Center and Microsoft Defender that protect against cybersecurity threats, detect and respond to incidents, and secure identities and data. This platform emphasizes proactive threat prevention, AI-driven security, and continuous monitoring to ensure the highest level of protection for data and systems. Microsoft Security is essential for maintaining robust cybersecurity defenses and compliance with industry standards.

MIT ESP supports organizations to identify which areas can be improved in terms of Security foot print and guide them to prepare better to battle with never ending cyber-threats. The Managed-NOC of MIT ESP monitors the customers IT assets 24x7 to identify any possible cyber attack and rapidly respond to minimize any impact caused to the IT infrastructure

Services Provided by MIT ESP:

- **Security Assessment and Planning:** Conduct security assessments to identify vulnerabilities and weaknesses and then create a comprehensive security strategy based on Microsoft Security tools.
- **Implementation and Configuration:** Deploy and configure security solutions such as Azure Security Center, Microsoft Defender, and Azure Active Directory to ensure they are tailored to the organization's needs.
- **Security Information and Event Management (SIEM):** Set up SIEM solutions to provide real-time monitoring, threat detection, and automated responses to security events.
- **Incident Response Planning:** Help organizations develop incident response plans, defining procedures for identifying, managing, and mitigating security incidents.
- **Security Awareness Training:** Conduct training programs to educate employees about security best practices, reducing the risk of security breaches through human error.
- **Security Operations Center (SOC):** Set up or improve an organization's SOC, providing 24/7 monitoring, threat detection, and incident response capabilities.
- **Security Auditing and Reporting:** Develop auditing and reporting solutions to track security events, generate compliance reports, and investigate incidents.

Azure Data and AI

Microsoft Data and AI represent a comprehensive suite of tools and services aimed at harnessing the power of data and artificial intelligence. This suite supports data-driven decision-making, advanced analytics, and machine learning, enabling organizations to gain insights and build intelligent applications. Microsoft Data and AI solutions are designed to help businesses unlock the full potential of their data and drive innovation and efficiency in various industries.

A certified and dedicated team of engineers at MIT ESP helps organizations harness the power of Data using various tools such as Microsoft Fabric, Power BI, Machine learning and Microsoft Open AI service

Services Provided by MIT ESP:

- **Data Strategy and Assessment:** Assess an organization's data needs and goals, helping to develop a data strategy that aligns with business objectives.
- **Data Integration:** Design and implement data integration solutions using tools like Azure Data Factory to connect, transform, and load data from various sources.
- **Data Warehousing:** Design and set up data warehousing solutions using Azure SQL Data Warehouse to enable advanced analytics and reporting.
- **Business Intelligence and Analytics:** Build data visualization and analytics solutions using tools like Power BI to provide valuable insights from data.
- **Data Migration and Modernization:** Migrating existing data and applications to the Azure Data and AI platform, helping organisations modernize their infrastructure.
- **Data Governance and Quality:** Establish data governance frameworks and quality assurance processes to maintain the integrity and reliability of data.
- **Advanced Analytics:** Develop advanced analytics solutions using tools like Azure Databricks for data exploration and transformation.

Business Applications

Microsoft Business Applications is a suite of software and services designed to help businesses streamline their operations and make data-driven decisions. It includes products like Microsoft Dynamics 365, offering integrated applications for customer relationship management and enterprise resource planning. Power Platform provides tools for custom application development, workflow automation, and data analytics. These applications enable organizations to improve customer relationships, automate processes, and gain insights from data, enhancing efficiency and decision-making across various business functions.

MIT ESP work closely with organizations to maximize the value and functionality of these applications, fostering efficiency, productivity, and improved customer relationships.

Services Provided by MIT ESP:

- **Assessment and Planning:** Assess an organization's needs and goals, then develop a strategic plan for the implementation and customization of Microsoft Business Applications.
- **Solution Design:** Design custom solutions using Microsoft Dynamics 365 to align with specific business processes and requirements, tailoring CRM and ERP functionalities.
- **Custom Development:** Develop custom applications, automation workflows, and reports within the Power Platform, such as Power Apps, Power Automate, and Power BI, to meet unique business needs.
- **Business Process Optimization:** Help streamline and optimize business processes by leveraging the automation and workflow capabilities of Power Platform.
- **Analytics and Reporting:** Create reports and dashboards using Power BI to provide insights from data, enabling data-driven decision-making.
- **Performance Optimization:** Ensure that the applications are tuned for performance and scalability as the organization grows.
- **Integration:** Integrate Microsoft Business Applications with other on-premises or cloud-based systems to create a seamless flow of data and processes within the organization.

Digital & Application Innovation

Microsoft's digital and application innovation initiatives encompass a wide range of efforts aimed at advancing technology, software, and services. These initiatives include developing cutting-edge applications, embracing emerging technologies like artificial intelligence, enhancing cloud computing platforms such as Azure, and fostering innovation in various industries. Microsoft focuses on creating intelligent, data-driven solutions that empower businesses and organizations to modernize their operations, improve efficiency, and drive digital transformation.

MIT ESP helps organizations stay competitive and harness the latest advancements in technology to drive business growth and efficiency.

Services Provided by MIT ESP:

- **Innovation Strategy:** Work with organizations to develop an innovation strategy that aligns with their goals, leveraging Microsoft's innovations to create business value.
- **Custom Application Development:** Develop custom applications and solutions using Microsoft's cloud platforms, such as Azure, to create innovative software that meets specific business needs.
- **Cloud Adoption:** Assist organizations in adopting and optimizing Microsoft's cloud solutions, enabling scalable and cost-effective application hosting and management.
- **Digital Transformation:** Help organizations embrace digital transformation by modernizing operations, automating processes, and improving the customer and employee experience.
- **IoT and Edge Computing:** Design and implement IoT solutions using Microsoft's Azure IoT services and edge computing capabilities for collecting and processing IoT data.
- **Application Modernization:** Assist in modernizing legacy applications, making them more agile, scalable, and compatible with modern technology standards.
- **Data Analytics and AI:** Leverage Microsoft's AI and data analytics tools to build predictive models, gain insights from data, and implement advanced analytics solutions.
