

VULCAN

vulcan.mimbus.com

VULCAN revolutionizes the approach to manual trades learning by making some unique tools available for the follow-up and control of your trainees' activities on the simulators. It therefore becomes your virtual assistant, allowing you to analyze your class' progression in real-time, to detect high-risk cases and reduce dropouts.

VULCAN is a totally CLOUD platform that communicates with training simulators in an autonomous and user-friendly way.

BENEFITS

-  *Improve instructor-trainee communication*
-  *Optimize the instructor's planning organization*
-  *Evaluate your trainees' competencies since school start*
-  *Reduce failure risks and improve results through a better follow-up*
-  *Motivate your trainees thanks to positive competition within the group*

WHAT IS VULCAN?

Unique in its genre, VULCAN is a follow-up system that tracks the trainees' activities on virtual simulators.

When a trainee is using a simulator, VULCAN analyzes key information related to his performances in real-time. It decomposes all the mobilized manual competencies and provides you with a complete analysis of your class' activities and warns you in case of dysfunction.

As an instructor, you can always intervene to adjust the learning path or the exercises' parameters. VULCAN releases this information to the simulators, so that each trainee works on an appropriate activity. You can therefore program and customize your training sequences, letting VULCAN ensure the good progression on the simulators.

VULCAN is a cloud solution, accessible from anywhere and on any platform. Totally open, VULCAN is connectable to all virtual simulators and allows you to create exercises that are tailor-made for each specific manual trade.
