

TEAMS PROVISIONINGS APP

Uniform, safe and controlled creation of new Teams

Juni 2022

Teams Provisioning App

The number of companies that want to use Microsoft Teams is continuously increasing. Therefore, establishing the right implementation strategy, decisions about policies and governance become more important as the organization grows.

Mindcore has developed a Teams Provisioning App to create new Microsoft Teams to collaborate with colleagues and external stakeholders. This ensures a uniform, safe and controlled creation of new Teams - every time! The solution is implemented directly in your cloud solution.

The advantage of our app

As part of our app, we have focused heavily on the integrability of the solution as well as a large degree of customization:

- ✓ Integrated into Team's clients
- ✓ Creation of Team's channels under established governance
- ✓ Possibility of prefix and/or suffix on the Team's name
- ✓ Possibility of dating for use in lifecycle management
- ✓ Mandatory or optional description
- ✓ Management of the minimum number of owners
- ✓ Specifying whether the Team may be opened to external users
- ✓ Indication and acceptance of governance/rules for use of Team

Flexible solution

Our Teams Provisioning App has a standard baseline, i.e. it comes with a fixed feature set as a starting point. The solution can also be adapted to special requirements and wishes for functionality, layout, etc.ms

Create new team MINDCORE

Team type:
 Standard team

Team name: * ⓘ
Give your new team a name..

Description: ⓘ
Description of the new team..

Owners: * ⓘ
Search for users

Enable sharing with externals:
 No

Privacy:
 Public (visible to all in your organization)

The owners of a team is responsible for upholding the following guidelines:

- There should always be at least two owners
- Make sure channels and content are maintained properly
- Ensure archival of content that is no longer relevant
- Regularly revise membership of the team for both internals and externals
- Pay extra attention to externals. You have the responsibility that only the right people have access to the team

I have read and understand the above

Experiences from customer cases

Mindcore has implemented the app for several of our customers, just as we naturally use it ourselves to provision new teams

Our expert on the solution

Thomas Frederiksen
Consultant

matas

Implementation of the Teams Provisioning App with few adaptations, primarily in relation to the use of customized welcome emails and branding with own colors and logo

**Esbjerg
Kommune**

Implementation of the standardized version of the Teams Provisioning App, which covers exactly their needs for Teams Governance.

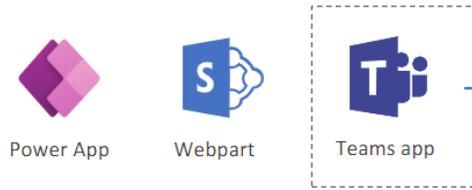

PLESNER

Implementation with Power App as front-end solution. In addition, Plesner wanted customized welcome emails and branding with its own colors and logo.

Technolution™

Technolution implemented a solution with different Team templates and a strong management of naming, in addition to branding with its own colors and logo.

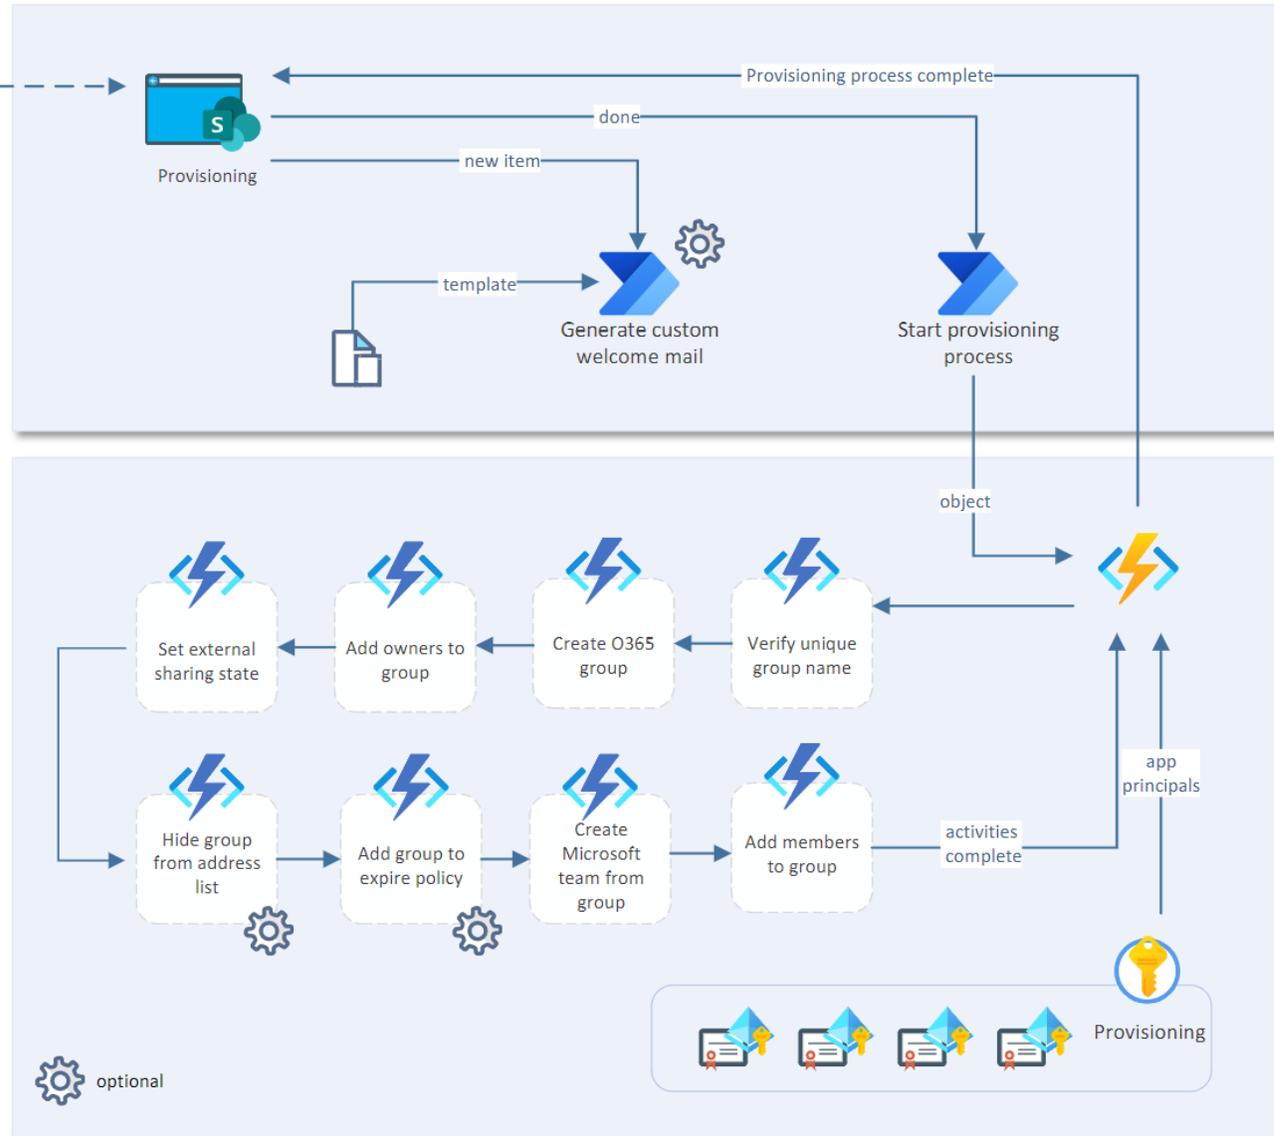

Overview of Teams Provisionerings App

What the user sees

The visual part of our solution is a simple Teams app that guides the user through the creation.

It is also possible to have a Power App, or a general SharePoint web part made as a front-end.

2. Automation

The automation that handles the process is an interaction between SharePoint and Power Automate. This ensures the lowest possible cost as well as great flexibility.

3. The engine itself

The actual provisioning engine behind the solution is a pure Azure solution. Components are selected to ensure optimal security, scalability and flexibility.
