

How can you protect users' data, while offering a smooth login experience?

Enter MIRACL Trust. The world's only single-step MFA.

We take the most frustrating part of every user experience – the multi-step, multi-factor authentication process – and replace it with a single PIN code (or biometric) that takes less than two seconds to login and authenticate.

It's totally compliant and highly secure, and an immediate way for companies to decrease churn, win lost revenue, and dramatically improve the user experience. We call it single-step MFA, and it's as easy to set up as it is to use.

MIRACL Trust works on any device or browser, removing the barriers to authentication to optimise user experience, decrease costs and win lost revenue.

That's why we have a 99.9% success rate for logins.

A high login success rate means:

- More time back to your users
- More sales
- More interactions
- More happy customers
- Less costs

"Every time we ask a customer to do something, we need to be sure it is truly necessary, because users hate unnecessary steps. Security challenges have to be faced by a bank and its customers together. That's why, if you want to secure access to your services, MIRACL makes it easy."

Florin Dimitru

IT Director at Crédit Agricole Romania

"MIRACL provides state of the art security for our users within an online experience they love. By prioritizing friction-free enrollment and login, we are putting players first, winning clients and growing fast. That growth would have been impossible without single-step MFA."

Obayomi Okubajo

Co-founder, MyLottoHub

"This integrated solution - a combination of an Identity Provider and Single Sign-On - requires no management by Rite Aid and stores no personally identifiable information (PII) making it a truly a zero-maintenance solution."

Nicole Farr, Manager,

Learning Design & Delivery, Rite Aid

"The first time we looked at MIRACL, we thought it was too good to be true, but it provided the most innovative, cost-effective and scalable MFA solution, and met all of our technical requirements. Above all, the MIRACL team demonstrated from day one that it understood our needs and would work collaboratively in a true partnership."

John Ferguson, Chief Risk Officer, Cashfac

CASHFAC

Great User Experience at Banking Level Security

Users want fast digital experiences and easy login processes. They don't want their data compromised. MIRACL Trust protects you and your customers, while offering a fail-safe login. Unlike other multi-step multi-factor authentication options, there are no redirects, no second devices, no additional apps, no SMS and no passwords. One PIN and you're in.

SECURE

With MIRACL Trust, a user inputs a secret PIN that only they know to verify their identity. No security-related information is stored on our servers, or yours, so there is nothing for a hacker to steal. As no credentials are exchanged, you're safe from all database breaches and man-in-the-middle attacks.

- Fully resistant to all remote and brute force attacks - with zero vulnerabilities through a zero knowledge protocol.
- Exceeds PSD2 SCA requirements and Dynamic Linking - the world's highest authentication standards for banks.

SIMPLE

Say goodbye to clunky authenticator apps and SMS.

- Single-step authentication - no second device or installation needed.
- 99.9% of login success rate.
- Two second login - 20x faster than other multi-step multi-factor authentication options.
- Intuitive design for easy user experience decreasing user frustration and friction

DEPLOYABLE

MIRACL Trust works from any device or browser, integrating easily with your current IT platform and user journey. No hardware necessary.

- Quick and seamless integration with your IT platform.
- Instantly scalable to millions of users - accessible from any handset or browser, independent of hardware and OS.

AFFORDABLE

Our prices are 90% cheaper than other solutions on the market. And there are no additional SMS costs or databases. Plus, imagine the time and resources saved by your IT helpdesk once password resets are out of the picture.

- You won't miss out on revenue from lost sales or lost time managing forgotten passwords.
- 90% cheaper than other single sign-on solutions on the market.
- With no infrastructure to maintain, no systems to manage, no licence to pay and reduced support - your total cost of ownership can be less than a password (and more secure).

BESPOKE, FLEXIBLE SETUP

Fully compliant with the most stringent security and privacy regulations, replace your existing MFA with MIRACL Trust. Or add it as a second stage to your current authentication methods.

- Full MFA to replace the current login process
- Integrates with the most popular identity stacks such as Auth0, Foregerock, OneLogin, Okta, WSD02, Shibboleth, Microsoft, Moodle and Micro Focus.

PRIVACY FIRST

MIRACL Trust does not hold any personal data. We safely authenticate all users without needing to store their details. A zero-knowledge proof methodology means the end user proves to the authentication service that they know a secret (their PIN), without revealing that secret to the verifying party.

- A zero-knowledge protocol - no information is stored about users
- A secret PIN, known only by the user, is never shared

Highly secure, password-free login in just two seconds.
The fastest way to improve UX, decrease costs and win lost revenue.
