

Your systems need modernization YOUR BUSINESS NEEDS THE EXPERTS

MLOGICA

The challenges you face every day

- ☑ Your outdated database and apps can't meet today's business needs
- ☑ Your current mission-critical business databases and applications lack the security, scalability and agility you need to succeed in today's environment.

Aging mainframe support costs are rising, labor pools are dwindling—and your system can't keep up

Slow, unadaptable and hard-to-staff, mainframes lock data in silos, making it inaccessible for today's ever-changing business demands. With the volume of new sources, including customer touchpoints, operations, internet, social media, devices and more, your existing platform can't capture data fast enough to drive decision-making.

Skyrocketing data center costs cut into profitability

Every year you throw away millions in infrastructure costs to support outdated technologies, when you could be leveraging the agility, flexibility, scalability and affordability of the cloud!

mLogica: Migrate to the cloud in one third the time and half the cost!

APPLICATIONS

Upgraded Automated migration of complex, mission-critical legacy and mainframe applications to any cloud or on-premise modern platform with our Mainframe Modernization Suite.

DATABASES

Transformed Automated migration of complex, homogeneous and heterogeneous, mission-critical legacy databases to any cloud platform with our leading-edge database modernization software.

Unmatched experience

mLogica has pioneered automated migrations of distributed and mainframe workloads for database, applications and hyperscale big data.

With decades of experience modernizing legacy IT systems across all industries, including 600+ successful engagements, for clients including Fortune 100 companies, mLogica offers:

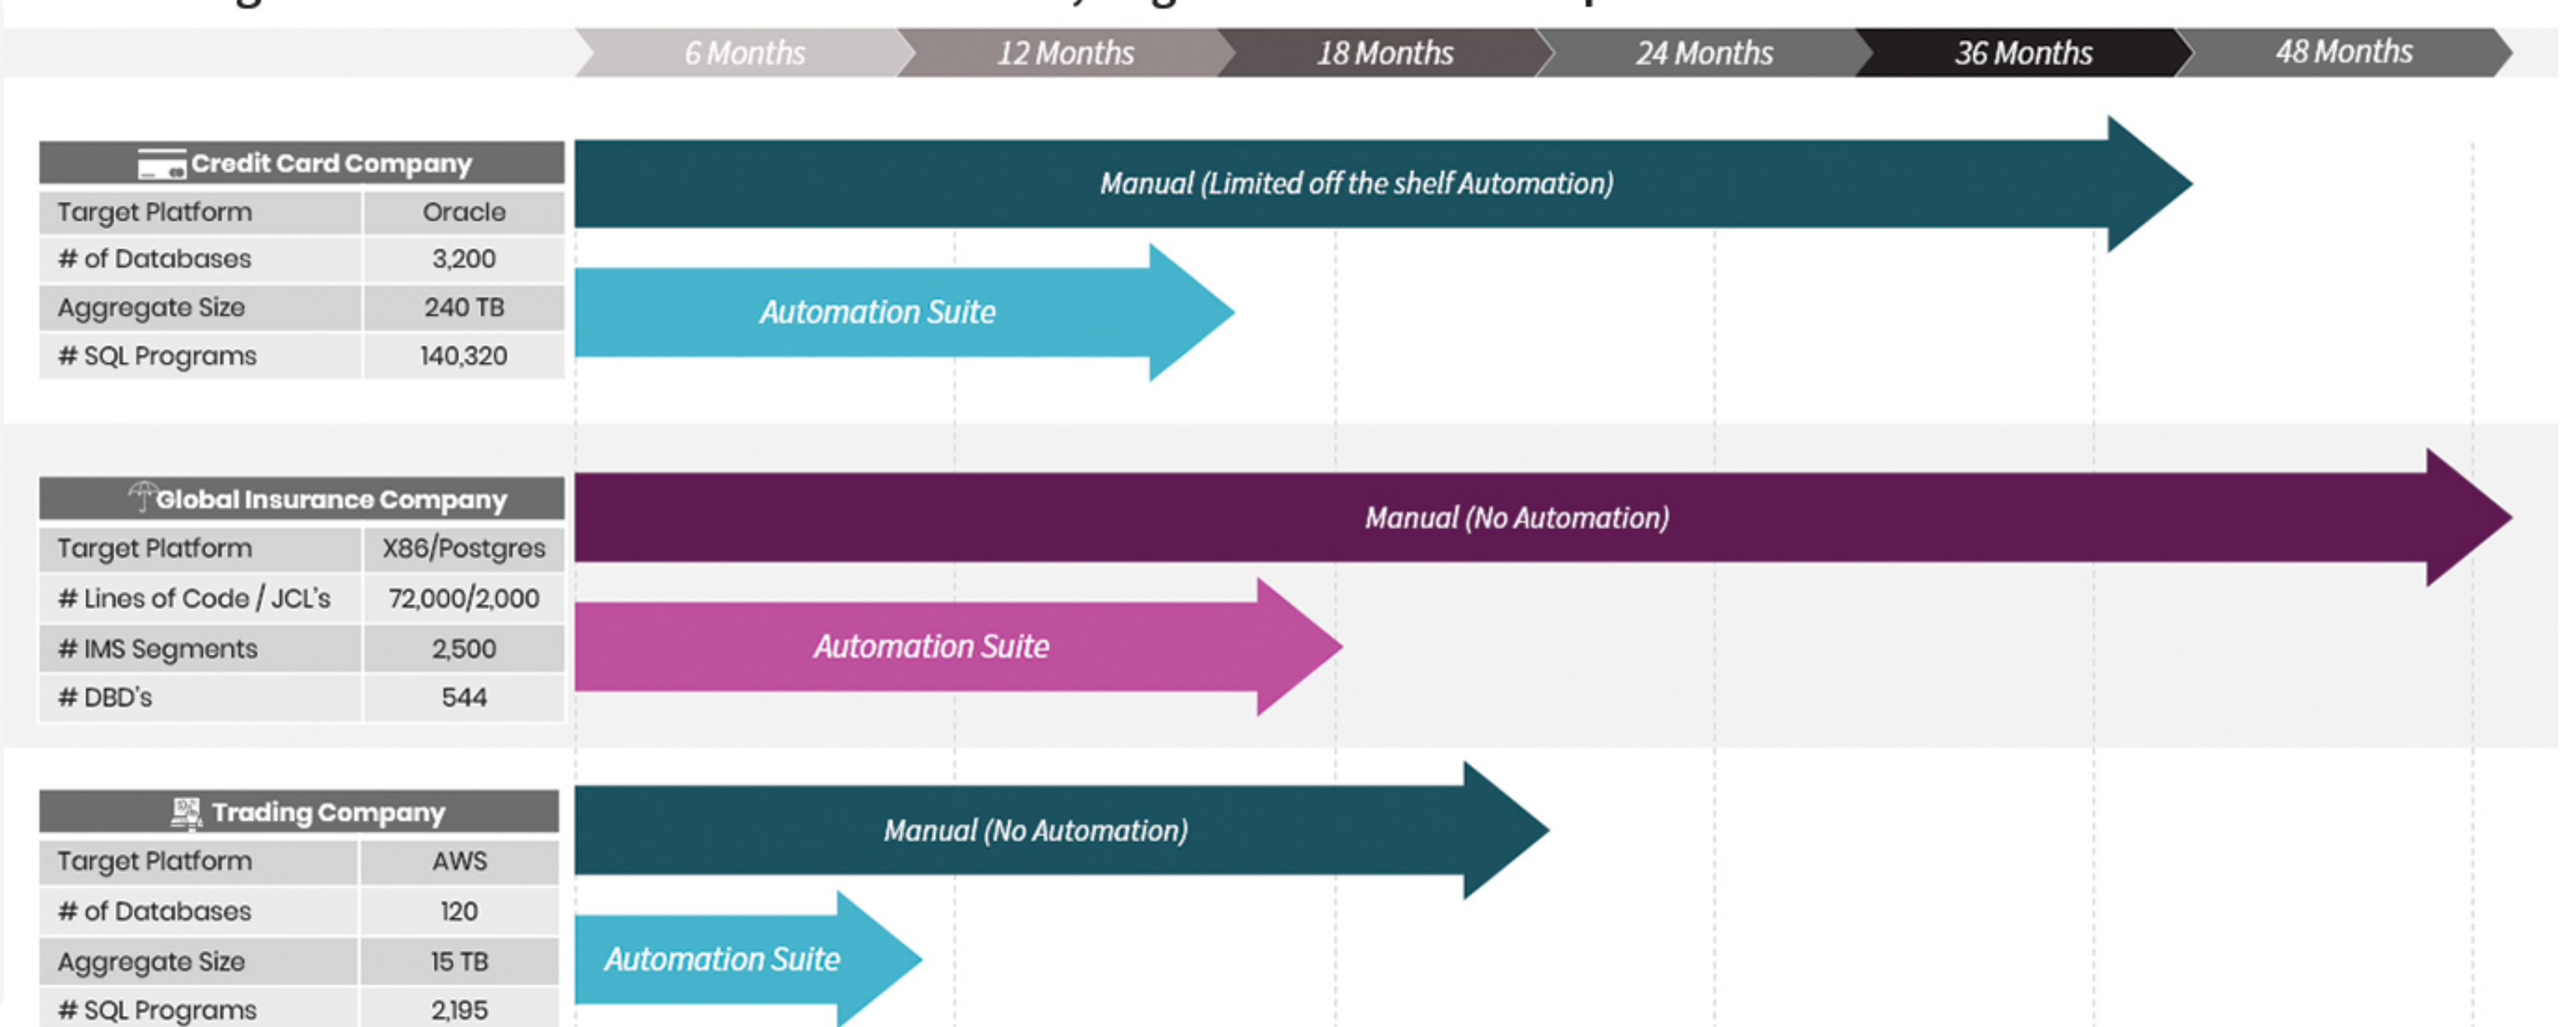

Accelerated Project Timelines

Typically 60% - 70% faster than manual rewrites, with end-to-end service and support for minimal business disruption

Dramatically Lower Costs

Exclusive automated tools sharply reduce time-consuming human error and labor

With mLogica's automated modernization suites, migrations can be completed in one-third the time and half the cost!

Unequaled technology

LIBER★M

LIBER★M Replatform, refactor and rearchitect mainframe applications to cloud native technologies with the most comprehensive suite of tools available in the market.

STAR★M

STAR★M Replatform and refactor legacy distributed databases and applications to cloud native technologies through a highly-automated & hardened translation engine.

CAP★M

CAP★M Our converged analytic platform engineered to support petabyte-scale complex events analytics and enriched information processing featuring ultra-high-speed ingestion to drive actionable intelligence.

TRAK★M

TRAK★M Managed services platform providing critical IT monitoring and management you need to ensure system stability and reliability.
