

Hybrid Meetings: Microsoft Teams Rooms

Microsoft innovations designed for hybrid work

Turn any room into an easy-to-use, inclusive **meeting** space

Enable everyone to fully participate from anywhere with premium audio, video, and real-time participation experiences

Bridge the gap between remote and on-site collaboration to **give attendees equal presence**

Create a natural and immersive experience with Front Row

- ◆ New layout in Microsoft Teams Rooms enables in-room participants to see remote colleagues face to face across a horizontal plane as if they were in the same room.
- ◆ Hear remote attendees with positional audio.
- ◆ Engage with Loop components and stay connected to meeting chat with immersive layout that surrounds meeting content with real-time chat and collaboration updates.

Focus on the meeting, not taking notes with intelligent speakers*

- ◆ Identify who in the room is speaking and apply their name to the meeting transcript with voice recognition technology from Microsoft.
- ◆ Identify and differentiate the voices of up to 10 people talking in a Microsoft Teams Room*.
- ◆ With speaker attributed—meeting transcription, those who missed the meeting can see a record of the conversation after the meeting.
- ◆ Available outside the US as of April 2022 with support for 16 languages.

* Intelligent speakers do not come with Teams Rooms and require separate purchase.

Foster team connection with live reactions

Engage beyond video with experiences that make you feel like you're there, even when you're not:

- ◆ **Increase understanding and engagement** with live captions.
- ◆ **Enable attendees** to “raise hand” without interrupting the speaker.
- ◆ **Focus on what matters** by pinning video and content.
- ◆ Use your phone or tablet as a companion device to **enhance meeting experiences**.
