

Intune for iOS

Intune provides device management and application management of iPhones & iPads in a single pane of glass

Smartphones and tablets are essential work devices, yet management of personal and corporate devices lags compared to Windows laptops.

Manage corporate and personal iPhones & iPads in Microsoft Intune, or manage work apps only without requiring users to give up control.

Our service delivers these valuable outcomes

- ✓ Corporate iPhones & iPads remotely provisioned and updated.
- ✓ Corporate iPhones & iPads deployed without a personal Apple ID.
- ✓ Personal iPhones and iPads receive application management without users having to hand over full control of their device.

How it Works

1 **Step One**
Discovery
and Design

2 **Step Two**
Configuration
and Testing

3 **Step Three**
Knowledge
Transfer

“ It makes me much more comfortable just knowing that mobile devices accessing our corporate emails system, in particular, are protected. We were able to take a big leap forward with Mobile Mentor.
