365 Accelerator

Do you want to get more value from Microsoft 365 and reduce overlapping products?

Microsoft 365 is an extremely rich suite of security and productivity tools. IT leaders can save money by retiring legacy processes and eliminating overlapping products. But where do you start?

The 365 Accelerator builds a deployment plan that adds value and saves money for your business.

The **365 Accelerator** is an assessment of your current endpoint security and employee experience that delivers three outcomes for the stakeholders:

3-phase roadmap with actionable steps to unlock value of Microsoft 365
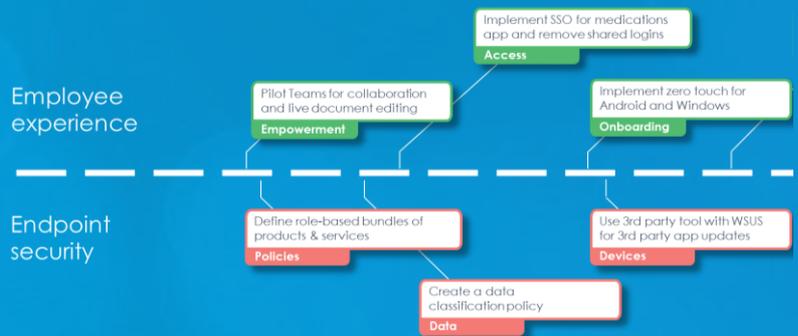

Projection of **cost savings** by retiring legacy and overlapping technologies

Quantification of **productivity gains** for each group of employees

"I really appreciate you taking this balanced approach to security and user experience. We cannot take a heavy-handed approach to security, that simply won't work, we need to be very deliberate and ensure we take everyone on the journey." - Joel Reeves, CIO, University of Tennessee
