# Resolve the EU PSD2 compliance challenge

## Using TPP Validation - Compliance as a Service

European banks are required to ensure access to approved Third-party Payment providers (TPPs). Our Azure hosted SaaS APIs allow banks to grant access only to validated and confirmed TPPs in realtime.

Payment Services Directive  
(PSD2)

### WHAT WE OFFER

Our Azure hosted regulatory support service allows Account Servicing Payment Service Provider (ASPSP, banks) to quickly comply with the EU Regulation EU2015/2366, Payment Services Directive 2 (PSD2) by allowing only approved TPPs controlled realtime access.

TPPs are required to present an eIDAS certificate when requesting any PSD2 API., Fully integrated, our service automatically validates and confirms incoming certificates against regulatory registers while performing a full trust chain validation.

Integration is fast, flexible and cost-effective with a single integration point.

The TPP Validation API is likely integrated in the customers Load Balancer or Firewall for automation and optionally with a Developer Portal for separate onboarding of the TPP.

Get free trial, procure and subscribe conveniently through the Azure Marketplace.
