# Molnify - Turn Excel models into web applications

Product description
2023

About Molnify

- Key feature of Molnify is **to create an application directly from your Excel files using regular Excel formulas** without the need of knowing any kind of programming language

- Founded due to use-cases present in most companies.
    - Most companies **use Excel and have in-house created Excel models** that they share amongst colleagues and/or customers
    - Many ideas never get past the **"Excel stage"** and turned into **tailormade software** due to **cost and timing**
    - Excel is a **great tool to create with**, but **hard for many users to use** when presented with a **custom model**
    - Sharing an Excel file has **low security** and the risk of user errors is big

- **Molnify solves all of the above** by letting the user create a **comprehensive web application** with **regular Excel formu**las in Excel, that can be **used by multiple people**
- The app can be **updated instantly** by the creator
- **Security is beefed up** by both hiding underlying formulas and data as well as login and password

molnify
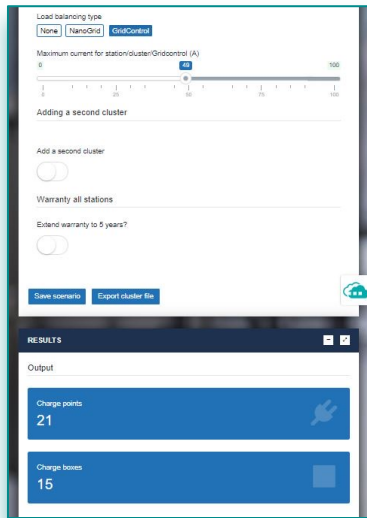

From Excel to web app in minutes

Build your Excel model
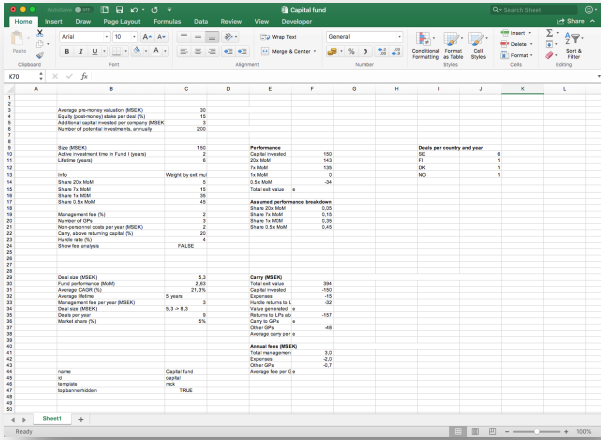

Color inputs and outputs

Test your app

molnify

Some of our customers

VATTENFALL

Charging box **configurator** and **ordering tool** both customer facing and internal

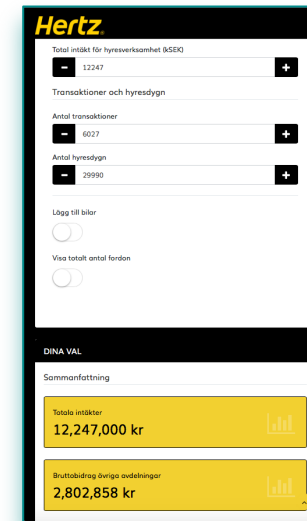

if...

B2C **webshop** for IF & Uber, using pricing calculation based on the driver's feedback score on Uber

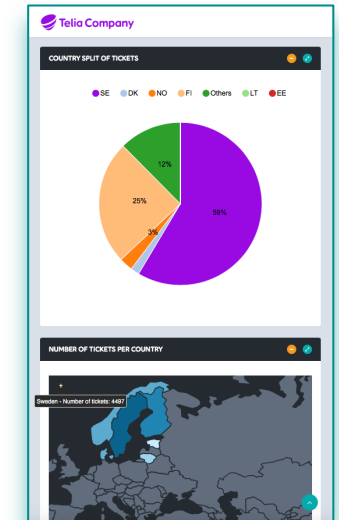

amazon prime video

Marketing configurator with database connection and Excel file generation

Hertz®

Business case model for partners shows the value add of the rental business for car dealers

Telia Company

Price configurator and offering tool for IOT products. Creates, saves and updates orders and offers

molnify

Key features

- **No source code or configuration in any other tool than Excel**

- **Underlying Excel models work perfectly without Molnify** too, with no lock-in

- All possible to **update without any knowledge beyond Excel**, including total remakes. Updates are live instantly for all users of an app

- **Always possible to extend functionality**, with e.g.,
    - Restrict access with logins
    - Save scenarios and/or data
    - Save and retrieve data from emails and/or DBs
    - Use on any device; phone, tablet or computer
    - Immediately update to all devices
    - Completely tailor look'n'feel using standards to match e.g., customers fonts, logotypes etc.
    - See more features at silde 9

molnify

How it's done

Output cells are colored **red**
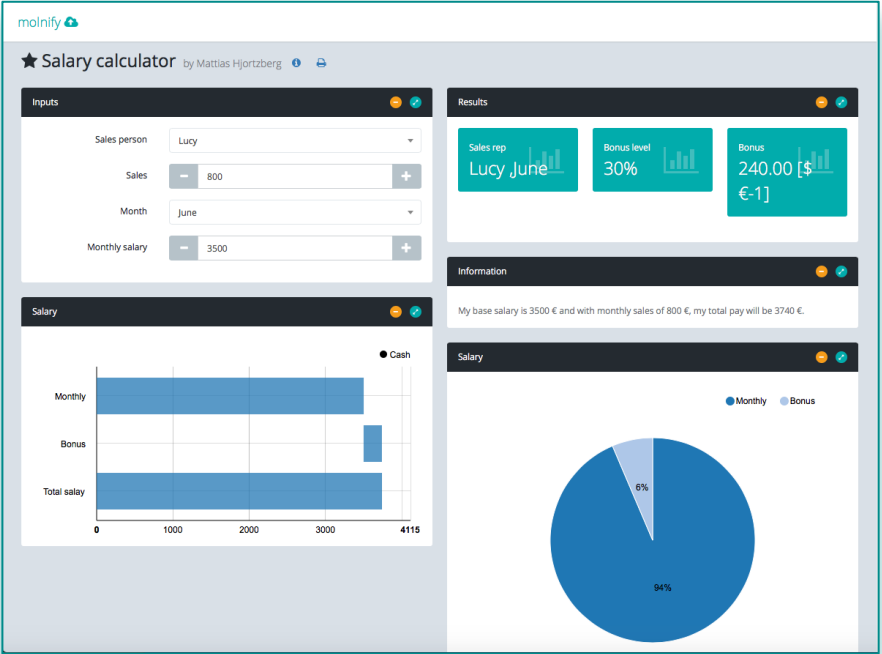

Input cells are colored **green**

Graph cells are colored **blue**

Cells with additional information about the app are colored **purple**
