

We simplify the use of Microsoft technologies. Making digital working a reality.

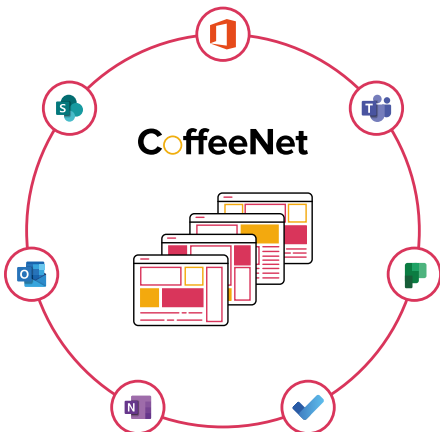

The digital workplace: not wishful thinking, but reality.

We know that many companies struggle with Microsoft's wide range of tools and fail to exploit their full potential – as a result, the digital workplace often remains wishful thinking.

With MondayCoffee modern working becomes reality. We simplify the use of Microsoft technologies. Not on paper, but in your daily work – in collaboration with your employees and with the help of a specially developed digital working environment called CoffeeNet 365.

CoffeeNet 365 is an enterprise software solution for the adoption of a modern way of working in companies.

At the push of a button, CoffeeNet 365 provides digital workspaces for collaboration in departments, on customer projects and in diverse work scenarios – with automated configuration of the corresponding Microsoft apps in the background – and expands the Microsoft Suite with key features that improve the user experience.

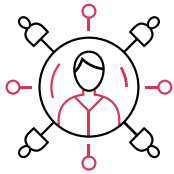

Where others stop, our consulting experts are only just getting started.

We make it our business to meet the needs of every employee when it comes to creating a modern way of working. We also support your company while these new technologies are being adopted. We provide help where your employees need it most – in their daily work, when they have to break ingrained habits and need experts at their side to make the benefits of a new way of working tangible within a real working environment.

«We are convinced that digitization must start with your employees. With the way they work. Together with your teams, specialists from departments or management, our consulting experts develop concepts to adapt and optimize your working methods in line with the digital age. But that is only the beginning. Based on many years of experience, we create new work scenarios that are immediately implemented, tested and applied within a proprietary digital workplace that is based on Microsoft 365. Only when all your employees are ready to break their old, counter-productive habits and have learned how to work efficiently in the digital age, will we have reached our goal.»

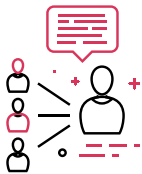

Reto Meneghini,
CEO & founder of MondayCoffee

With CoffeeNet 365, companies can create a digital workplace that meets the demands and needs of today's employees, teams and organizations.

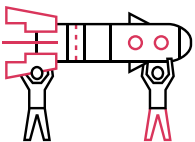

Working as an individual

Work easily and securely with CoffeeNet 365 – anywhere, any time and from any device. On the start page of CoffeeNet 365 your employees will find all company information as well as personalized links to projects, working groups, product pages and more. With the help of a cross-platform search function, people, documents, conversations and other data can be found easily and quickly – in one place.

Collaborative working within the line organization

CoffeeNet 365 allows colleagues in a business unit, department or team to work together digitally and efficiently. Information and documents are compiled at a central location and, if desired, made available to the entire organization at the click of a mouse. Knowledge is exchanged online and made retrievable. E-mails are replaced by chats, and links to online documents are sent instead of attachments.

Cross-organizational working

CoffeeNet 365 enables immediate, simple and secure collaboration with colleagues in other teams, countries or companies. At the push of a button, new online workspaces can be set up – for example for projects. From there, you can manage documents, publish news or organize group calls. If documents need to be exchanged with external members, this can be done securely and easily from within the same workspace via mouse-click.

Key features of CoffeeNet 365

- CoffeeNet 365 features a proprietary “Template Engine”. At the push of a button, this creates digital workspaces (“Workspace Templates”) for collaborative projects within departments, on customer projects and in diverse work scenarios – with automated configuration of the corresponding Microsoft technologies in the background.
- CoffeeNet 365 “Workspace Templates” are characterized by flexibility for individuals, uniformity for the entire organization as well as clear governance and simple administration.
- CoffeeNet 365 contains a selection of best-practice “Workspace Templates” with a standardized structure and a pre-configured suite of apps for communication, knowledge sharing, collaboration and document management.
- CoffeeNet 365 comes with a number of unique apps that enhance the user experience and increase the added value of Microsoft 365.
- CoffeeNet 365 is designed as an “evergreen service” and is based on the Microsoft standard. The Microsoft Roadmap is an integral part of the future development of CoffeeNet 365. In addition, our proprietary CoffeeNet 365 functionality is continuously developed and periodically updated. We thus ensure that CoffeeNet 365 is always kept up-to-date.

Your added value

- We make sure you can fully exploit the potential of Microsoft technologies for a modern, digital way of working and realize significant benefits for your employees and organization as a whole. Your team is no longer left struggling with the sheer variety of available tools and can instead reap the benefits of an intuitive working environment. This lightens the load on your IT department by enabling your teams to organize themselves, which in turn leads to a more efficient overall organization.
- CoffeeNet 365 is always up-to-date – our technology experts receive insights into new developments from Microsoft even before their market release and are actively involved in the design process. New solutions are tested at an early stage and implemented into CoffeeNet 365 in accordance with your requirements.
- CoffeeNet 365 does not compete with Microsoft products, but rather integrates the various technologies in an employee-centric and organization-specific manner. The adoption of a modern way of working in your company is therefore not a “tool-centric” process. On the contrary, it all begins and ends with your employees – by giving them the confidence to break old habits and embrace new ones.
