Infra and Database Migration

Azure VMware Solution (AVS) allows you to run VMware environments natively on Azure, leveraging the power and scalability of Microsoft's public cloud without the need to re-architect or refactor existing applications. AVS provides seamless migration while maintaining consistency with the VMware tools and processes you already use on-premises. This ensures efficient resource management and cost optimization in the cloud, with full integration into Azure services.

Our Azure VMware Solution Assessment is designed to offer a comprehensive evaluation of your current VMware infrastructure and its migration to Azure. Over 5 days, we will assess your infrastructure, identify application dependencies and networking requirements, and provide a detailed estimate of expected consumption on Azure.

WHY CHOOSE AVS?

MIGRATE QUICKLY
↓

AVS offers the ability to easily extend and migrate existing VMware environments to Azure, enabling native execution on this platform and maintaining consistency with on-premises environments. This enables rapid migration, allowing you to take advantage of the benefits of the cloud in the shortest possible time.

MAINTAIN AND INNOVATE
↓

AVS enables customers to maintain existing VMware skills and operational processes while integrating them with Azure cloud services to modernize applications, including innovation with artificial intelligence.

REDUCE COSTS
↓

From an economic perspective, AVS offers significant opportunities for cost reduction and containment. According to a 2023 IDC report**, companies adopting AVS can reduce infrastructure costs by up to 30 percent and 3-year TCO by 37 percent.

THE ASSESSMET

01
Evaluate current infrastructure

A comprehensive evaluation of your applications and dependencies ensures a smooth migration by identifying key connections, minimizing risks, and optimizing performance in the cloud.

02
Assess migration feasibility

Identify the networking and security requirements necessary for a successful migration. This involves analyzing your current setup and ensuring that it aligns with Azure's capabilities and best practices.

03
Estimate Azure consumption

We provide a detailed projection of the expected costs and resource usage for running your VMware workloads on Azure. This helps in budgeting and planning for the transition.
