Basis op Orde
Setting a secure baseline voor Microsoft 365

—

One of the main characteristics for any Microsoft 365 environment is the amount of information which can be stored, shared, and managed using the relevant platforms. This information can be easily accessed and shared from any location and at any given time. The right measures need to ensure that the Confidentiality, Integrity and Availablity (CIA) levels for the information are guarenteed and we can comply with internal and external compliance rules and regulations.

Cloud Security Care

Securing Microsoft 365

Using platforms like Microsoft Teams, SharePoint Online, OneDrive for Business and Yammer, employees and partners can use Microsoft 365 to collaborate and share information. Securing this process does offer some challenges:

- How to manage the access to information and the partners we collaborate with?
- How to manage and protect our identitief?
- How to identitfy our (most) sensitive information and how to protect this?

The so-called "Basis op Orde" (= Setting up the Basics) program is aimed to set a secure baseline for Microsoft 365. Working with the organization, all necessary measures are identified. These measures are required to protect your information and identities, identify any anomalies or incidents and to act on these. The **Protect, Detect, Investigate and Respond model**.

The secure baseline contains all measures which can be set on the short-term. These are needed to work securely with Microsoft 365. Additional measures and processes for the long term are also identified. The main focus for these are identity & information protection, mobile device or application management and migitating advanced internal and external threats.

At the end of the Basis op Orde program you can be ensured of a secure Microsoft 365 environment on the short-term and a roadmap for future enhancements. All measures which van be addressed on the short-term and which are based on your license agremeent, are implemented.

Basis op Orde program

The program is based around several workshops/sessions and has a normal duration of three weeks. These sessions include:

During an **inspiration session** we take a journey through the world of threats and opportunties.

During the **Secure Score and Threats workshop**, Microsoft 365 Secure Score and Azure AD Identitfy Protection are used to gain insight into the current maturity of your security.

The workshops **Identity, Information, Device Management** en **Azure** discuss these specific components.

The program delivers a made to measure **roadmap** with short-term, middle-term and long-term recommendations for enhancing your Microsoft 365 security posture.

Target audience

- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Security Officer
- IT Manager
- IT Security
- IT Compliance
