Mover TMS

Orchestrating smarter logistics

Mover's **Transport Management System (TMS)** is a SaaS platform that streamlines distribution and complex logistics.

By centralizing control, ensuring transparency and automating workflows, the platform turns logistics into a strategic advantage, delivering faster, more reliable service while cutting costs and emissions.

The challenges of complex logistics

Complex distribution faces a unique set of challenges:

- Disconnected processes and fragmented or insufficient data lead to inefficiencies, delays, and missed opportunities for optimization.[MH1] [OB2]
- Lack of real-time visibility hinders proactive decision-making
- Rising customer demands require faster, more reliable deliveries
- ESG pressures require greater transparency and efficiency

Disconnected processes

Rising customer demands

Lack of real-time visibility

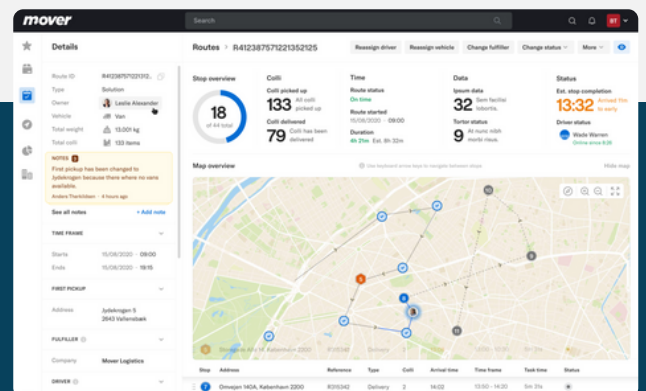

Pressures of ESG reporting

What we offer

Mover TMS delivers results

Built for the complexities of large-scale distribution, Mover TMS addresses these challenges with extensive platform capabilities. We centralize logistics operations, offering a collaborative solution that integrates all necessary stakeholders.

Fully automated workflows and deviation handling with real-time tracking, advanced route optimization, and predictive analytics allow you to reduce costs, enhance service quality, and achieve sustainability goals.

**With Mover TMS,
you don't just manage
logistics—you master it**

Advanced features for enterprises

Mover TMS is equipped with powerful features designed to handle the complexities of large-scale logistics operations. From automation to analytics, our platform ensures every aspect of your distribution network is streamlined and efficient.

End-to-end automation

Manage the entire order journey seamlessly—from planning and staging shipments, dispatching, distribution and service delivery, to post-delivery assessment. Automation minimizes manual tasks, reduces errors, and ensures consistent operational excellence.

Datadriven operations

Gain real-time visibility across your supply chain, with accurate data for continuous improvement and detailed reporting. Optimize operations, anticipate delays, and drive smarter decisions at every stage.

Advanced route optimization

Including advanced configuration to optimize distribution, handle constraints like gate allocation, driver breaks, and overnight loading. Reduce delivery times, fuel consumption, and costs while meeting tight deadlines.

Intelligent Carrier and Driver selection

Leverage AI and predictive analytics to assign routes to the best carriers and drivers. Minimize inefficiencies, streamline driver onboarding, and ensure compliance with SLAs and financial agreements.

Seamless system integration

Connect Mover TMS to your ERP, WMS, or CRM systems for unified data management. With our open architecture, the platform integrates effortlessly into your existing ecosystem, eliminating silos and orchestrating end-to-end collaboration.

How we work together

We're your strategic partner in digital transformation. Combining a hands-on mindset with deep industry expertise, we offer a tailored solution that fits your operations and priorities.

- **Tailored to your needs:** We begin by mapping your workflows and identifying opportunities, then configuring the system to support your unique operations
- **Seamless integration:** Our open architecture integrates with your existing ERP, WMS, and CRM systems, unifying your logistics data into one platform
- **Empowering your team:** Comprehensive training and change management assist your teams to fully leverage the platform's capabilities
- **Aligned with your goals:** Together, we define KPIs and performance metrics to ensure the system delivers measurable results

About Mover

Mover is a leading transport and technology company dedicated to transforming logistics with a digital-first approach.

We provide last-mile delivery and tailored transport solutions, powered by our advanced TMS, empowering businesses to achieve efficient, reliable, and sustainable logistics operations. We seamlessly integrate technology with our deep logistics expertise to be your strategic partner in modernizing logistics.

Smarter logistics – powered by tech.
