# PERSONALIZED **VIRTUAL CARE** & **REMOTE MONITORING**

Mozzaz is an industry leader in digital health technology with deep expertise in creating highly personalized, virtual care solutions helping healthcare organizations empower those they serve with digital tools for remote care management. Mozzaz delivers a wide range of telehealth solutions like remote patient monitoring, patient engagement, and virtual care technologies on a stand-alone basis or integrated into a comprehensive solution, all from a unified digital health platform. Mozzaz integrates into existing clinical workflows for full interoperability, ensuring seamless clinician and patient experiences.

Virtual Care

Digitize personalized patient care plans, with automated interventions & specialized tools for virtual care management:

- Fully digitized patient care plans
- Secure video visits and messaging
- Alerts and reminders to encourage adherence and engagement
- Digital self-assessment forms
- Rules-based digital interventions
- Clinician dashboards, documentation, and reporting
- Secure electronic visit verification (EVV)
- Augmentative & alternative communication (AAC)
- Digital appointment scheduling
- Online referral management
- SDK & extensible APIs for embedded solutions

Care Programs

Customize pre-existing digital libraries to quickly deploy a virtual care solution for patients in the following programs:

- Long-Term Services & Supports
- Pre & Post-Operative Care
- Behavioral Health
- Chronic Diseases
- And More

Remote Patient Monitoring

Deploy an isolated RPM solution or combine it with our virtual care solution for a holistic patient experience:

- Device provisioning & distribution
- Device connectivity & data collection
- Patient application
- Digital surveys & content
- Clinician dashboards
- Billing reports for CMS reimbursement

Built On :: **Microsoft Cloud**
Trusted & Secure

mozzaz

Proven Benefits

Reduce readmissions & ED utilization through increased data collection & monitoring for earlier interventions

Improve treatment outcomes by increasing patient engagement, education & medication adherence

Leverage prescriptive analytics to identify patients who are at-risk & use insights to drive more informed virtual care plans

Increase collaboration across care team members with easy information sharing

Optimize staff efficiency with telehealth services, enabling more patient care

Capture additional CMS revenue & cost savings by increasing use of telehealth & decreasing utilization of resources

Increase patient satisfaction alongside HEDIS measures, CAHPS & CMS star ratings

One Platform, Multiple Solutions

Azure Power BI twilio Rhapsody

Designed with flexibility in mind, the Mozzaz platform can successfully digitize patient experiences across any patient, program, service, or clinical pathway. The platform is healthcare enterprise-ready & boasts full interoperability with existing clinical systems like EHRs. Built into the platform is our Adaptive Intervention Modeler (AIM) technology, a data-driven, rules-based engine allowing for the seamless delivery of personalized virtual models of care.
